INNOVATOR IN ELECTRONICS

SMD/BLOCK Type
EMI Suppression Filters EMIFIL®

EU RoHS Compliant

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
- For more details, please refer to our web page, "Murata's Approach for EU RoHS" (http://www.murata.com/en-eu/support/compliance/rohs).

Contents

Product specifications are as of September 2018.

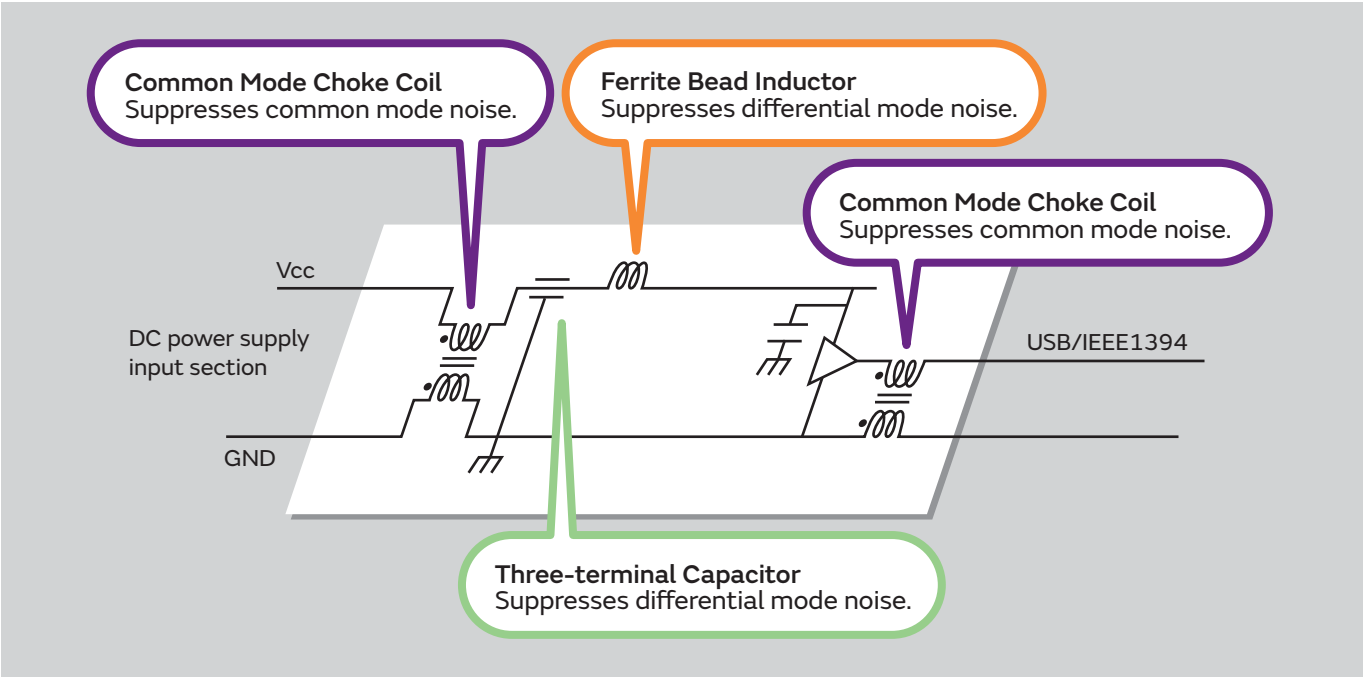
Please check the MURATA website (**https://www.murata.com/**) if you cannot find a part number in this catalog.

Selection Guide for Noise Suppression Filters

Features & Suitable Circuits

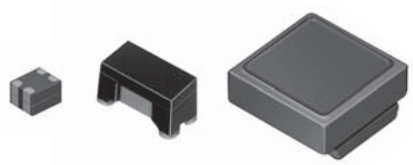
Type Representative series name	Features	Suitable Circuits
Ferrite Bead **BLM/BLA Series** 	· Miniaturized · GND connection unnecessary · Effective at low impedance line	· Application set with less noise radiation · Low impedance line
Capacitor Type **NFM/NFA/NFE/ NFL/NFW Series** 	· Great noise suppression effect · With effect as bypass capacitor (Lineup for Power) · Good noise separation from signal (LC filter for Signal) · Effective at high impedance line	· Application set with higher noise radiation · High impedance line · Circuit with bypass capacitor · Circuit driven by high frequency
Common Mode Choke Coil **DLW/DLM/DLP Series** 	· Possible to suppress noise with less affect of ultra-high-speed signal · Significant improvement in common mode noise · Less magnetic saturation by current	· High-speed differential signal line · I/F cable driver · Power line

Example



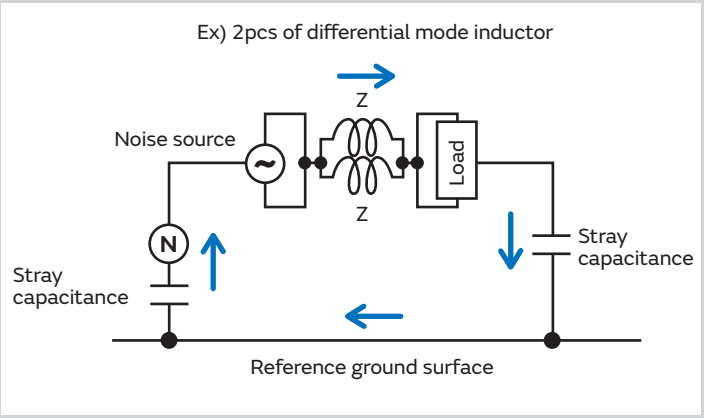
Selection Guide for Noise Suppression Filters

Advantages to Using Common Mode Choke Coils



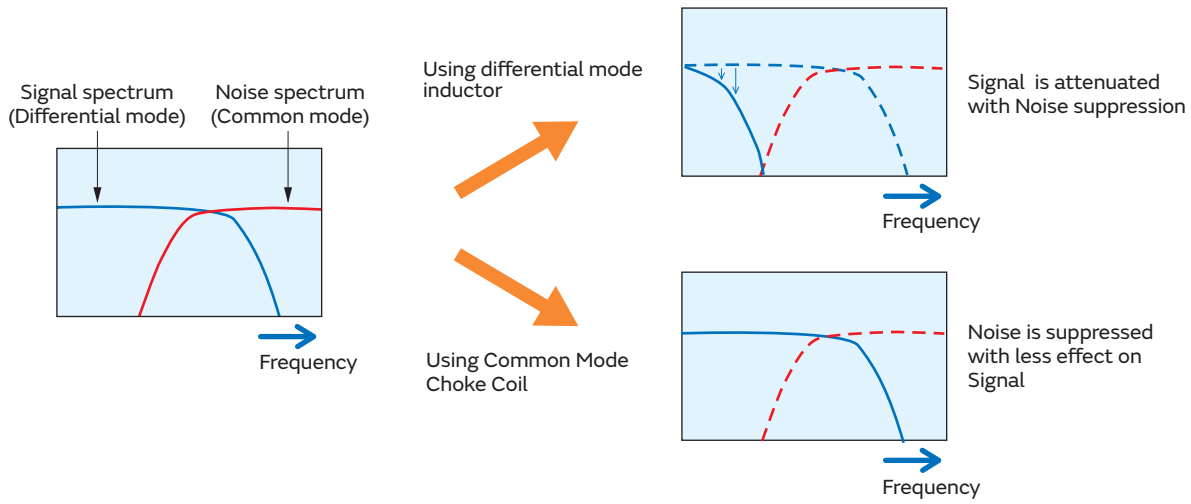
1. Great Effect for Common Mode Noise

Differential mode inductors work as a half impedance for common mode noise.
Common Mode Choke Coils are effective for common mode noise.



2. Possible to Suppress Noise with Less Effect on the Ultra-High-Speed Signal

Common Mode Choke Coils can suppress Noise with less effect on the Signal, even if the frequency range of Signal and Noise are the same, because they separate each conductive mode of current.



3. Less Magnetic Saturation by Current

Common Mode Choke Coils are effective for noise suppression of DC power lines, due to their less magnetic saturation at high power current, which comes from their construction of cancelling magnetic flux of the differential mode current at each coil.

Product Guide

BLM/BLA/BLT

Chip Ferrite Bead

Part Number		Size Code in inches (mm)	Impedance		Rated Current
			at 100MHz	at 1GHz	
BLM02PX*	p26	01005 (0402)	10Ω to 60Ω	-	500mA to 1.1A
BLM02KX*	p28	01005 (0402)	10Ω to 18Ω	-	1.2A to 1.5A
BLM02AX	p29	01005 (0402)	10Ω to 240Ω	-	200mA to 750mA
BLM02BB/BC	p31	01005 (0402)	10Ω to 100Ω	95Ω to 240Ω	125mA to 250mA
BLM02BX*	p32	01005 (0402)	120Ω to 240Ω	-	240mA to 350mA
BLM03PG	p33	0201 (0603)	22Ω to 33Ω	-	750mA to 900mA
BLM03PX*	p34	0201 (0603)	22Ω to 120Ω	-	900mA to 1.8A
BLM03AG	p36	0201 (0603)	10Ω to 1000Ω	-	100mA to 500mA
BLM03AX	p38	0201 (0603)	10Ω to 1000Ω	-	200mA to 1A
BLM03BB/BC/BD	p39	0201 (0603)	10Ω to 600Ω	-	100mA to 300mA
BLM03BX	p41	0201 (0603)	1000Ω to 1800Ω	-	140mA to 170mA
BLM15PD*/PG	p42	0402 (1005)	10Ω to 120Ω	-	1A to 2.2A
BLM15PX*	p44	0402 (1005)	33Ω to 600Ω	-	900mA to 3A
BLM15KD*	p46	0402 (1005)	20Ω to 120Ω	-	1.5A to 3.8A
BLM15AG	p47	0402 (1005)	10Ω to 1000Ω	-	300mA to 1A
BLM15AX	p48	0402 (1005)	10Ω to 1000Ω	-	350mA to 1.74A
BLM15BA/BB/BC/BD	p50	0402 (1005)	5Ω to 1800Ω	-	100mA to 500mA
BLM15BX	p53	0402 (1005)	75Ω to 1800Ω	-	250mA to 600mA
BLM18PG*	p55	0603 (1608)	30Ω to 470Ω	-	1A to 3A
BLM18KG*	p57	0603 (1608)	26Ω to 1000Ω	-	1A to 6A
BLM18SD*/SG*/SN*	p59	0603 (1608)	22Ω to 330Ω	-	1.5A to 8A
BLM18AG	p62	0603 (1608)	120Ω to 1000Ω	-	450mA to 800mA
BLM18TG	p64	0603 (1608)	120Ω to 1000Ω	-	100mA to 200mA
BLM18BA/BB/BD	p65	0603 (1608)	5Ω to 2500Ω	-	150mA to 800mA
BLM18RK	p69	0603 (1608)	120Ω to 1000Ω	-	200mA
BLM21PG*	p71	0805 (2012)	22Ω to 330Ω	-	1.5A to 6A
BLM21SN*/SP*	p73	0805 (2012)	30Ω to 1000Ω	-	1.6A to 8.5A
BLM21AG	p75	0805 (2012)	120Ω to 1000Ω	-	600mA to 1A
BLM21BB/BD	p77	0805 (2012)	5Ω to 2700Ω	-	200mA to 1A
BLM21RK	p80	0805 (2012)	120Ω to 1000Ω	-	200mA
BLM31KN*	p81	1206 (3216)	120Ω to 1000Ω	-	2A to 6A
BLM31PG*	p83	1206 (3216)	33Ω to 600Ω	-	1.5A to 6A
BLM31SN*	p85	1206 (3216)	50Ω	-	12A
BLM41PG*	p86	1806 (4516)	60Ω to 1000Ω	-	1.5A to 6A
BLT5BPT_LN1*	p88	2020 (5050)	68Ω	-	11A
BLA2AAG (4 circuits array)	p89	0804 (2010)	120Ω to 1000Ω	-	50mA to 100mA
BLA2ABB/BD (4 circuits array)	p90	0804 (2010)	10Ω to 1000Ω	-	50mA to 200mA
BLA31AG (4 circuits array)	p92	1206 (3216)	30Ω to 1000Ω	-	50mA to 200mA
BLA31BD (4 circuits array)	p93	1206 (3216)	120Ω to 1000Ω	-	50mA to 150mA
BLM03HB/HD/HG	p94	0201 (0603)	190Ω to 1800Ω	750Ω to 3000Ω	100mA to 200mA
BLM03EB*	p96	0201 (0603)	25Ω to 50Ω	105Ω to 255Ω	400mA to 600mA
BLM15HB/HD/HG	p97	0402 (1005)	120Ω to 1800Ω	500Ω to 2700Ω	200mA to 300mA
BLM15EG*	p99	0402 (1005)	120Ω to 220Ω	145Ω to 270Ω	700mA to 1.5A
BLM15EX*	p100	0402 (1005)	120Ω to 470Ω	170Ω to 630Ω	950mA to 1.8A
BLM15GA/GG	p102	0402 (1005)	75Ω to 470Ω	600Ω to 1200Ω	200mA to 300mA
BLM18HB/HD/HE*/HG/HK	p103	0603 (1608)	120Ω to 1500Ω	400Ω to 1700Ω	50mA to 800mA
BLM18EG*	p107	0603 (1608)	100Ω to 600Ω	140Ω to 700Ω	500mA to 2A
BLM18GG	p109	0603 (1608)	470Ω	1800Ω	200mA

* The derating of rated current is required for some items according to the operating temperature on each product page.

NFZ_S

Noise filter for audio lines

Part Number	Size Code in inches (mm)	Impedance				Rated Current
		at 1MHz	at 100MHz	at 900MHz	at 1.7GHz	
NFZ03SG p126	0201 (0603)	-	-	330Ω to 1600Ω	400Ω to 1200Ω	180mA to 305mA
NFZ15SG p127	0402 (1005)	-	-	100Ω to 4600Ω	160Ω to 1800Ω	270mA to 1.1A
NFZ18SM* p129	0603 (1608)	-	120Ω to 700Ω	-	-	800mA to 1.25A
NFZ2MSM p131	0806 (2016)	-	100Ω to 600Ω	-	-	2.5A to 4A
NFZ32SW p132	1210 (3225)	3.2Ω to 6.8Ω	300Ω to 900Ω	-	-	2.05A to 2.55A

* The derating of rated current is required for some items according to the operating temperature on each product page.

NFZ_B

Noise filter for LED lighting equipment

Part Number	Size Code in inches (mm)	Impedance (at 1MHz)	Rated Current
NFZ2HBM p133	1008 (2520)	1.5Ω to 60Ω	400mA to 1.2A
NFZ32BW* p135	1210 (3225)	3.3Ω to 880Ω	200mA to 2.9A
NFZ5BBW* p139	2020 (5050)	2.9Ω to 140Ω	1.05A to 4A

* The derating of rated current is required for some items according to the operating temperature on each product page.

BLF

Frequency specified noise filter

Part Number	Size Code in inches (mm)	Target Frequency	Rated Current
BLF02JD* p142	01005 (0402)	700MHz	330mA to 380mA
BLF02RD* p143	01005 (0402)	2.4GHz	200mA to 330mA
BLF03JD* p144	0201 (0603)	700MHz	480mA

* The derating of rated current is required for some items according to the operating temperature on each product page.

BLE

Noise filter for power charger lines

Part Number	Size Code in inches (mm)	Impedance (at 100MHz)	Rated Current
BLE18PS* p145	0603 (1608)	8.5Ω	8A
BLE32PN p146	1210 (3225)	26Ω to 30Ω	10A

* The derating of rated current is required for some items according to the operating temperature on each product page.

LQW_CA

Inductor for audio line noise suppression

Part Number	Size Code in inches (mm)	Inductance	Rated Current
LQW04CA_00 p147	03019 (0805)	60nH to 510nH	200mA to 620mA
LQW15CA_00 p148	0402 (1005)	22nH to 2000nH	130mA to 1300mA
LQW18CA_00 p150	0603 (1608)	32nH to 580nH	450mA to 2200mA

NFE

Feed-Through Chip EMI Filters

Part Number	Size Code in inches (mm)	Capacitance	Rated Current
NFE31PT p172	1206 (3216)	22pF to 2200pF	6A
NFE61PT p173	2706 (6816)	33pF to 4700pF	2A

NFL/NFA/NFW

LC Combined Chip EMI Filters

Part Number	Size Code in inches (mm)	Nominal Cut-off Frequency	Rated Current
NFL18ST p174	0603 (1608)	50MHz to 500MHz	75mA to 200mA
NFL18SP p176	0603 (1608)	150MHz to 500MHz	100mA
NFL21SP p177	0805 (2012)	10MHz to 500MHz	100mA to 300mA
NFA18SL (4 circuits array) p178	0603 (1608)	50MHz to 480MHz	25mA to 100mA
NFA18SD (4 circuits array) p181	0603 (1608)	180MHz to 200MHz	25mA
NFA21SL (4 circuits array) p182	0805 (2012)	50MHz to 330MHz	20mA to 100mA
NFW31SP p184	1206 (3216)	10MHz to 500MHz	200mA

DLM/DLP/DLW/NFP

Common Mode Choke Coil/Common Mode Noise Filter

Part Number	Size Code in inches (mm)	Common Mode Impedance (at 100MHz)	Rated Current
DLM0QS (Limited for differential signal interface line) p202	025020(0605)	12Ω to 90Ω	50mA to 150mA
DLM0NS (Limited for differential signal interface line) p203	03025(0806)	12Ω to 90Ω	100mA to 160mA
DLM11G p205	0504(1210)	600Ω	100mA
DLM11S p206	0504(1210)	45Ω to 90Ω	100mA
DLP0QS p207	025020(0605)	7Ω to 35Ω	100mA
DLP0NS p208	03025(0806)	7Ω to 120Ω	75mA to 110mA
DLP11R p210	0504(1210)	15Ω to 45Ω	100mA
DLP11S p212	0504(1210)	35Ω to 330Ω	80mA to 180mA
DLP11T p214	0504(1210)	80Ω	100mA
DLP31S p215	1206(3216)	120Ω to 550Ω	100mA
DLP1ND (2 circuits array) p216	05025(1506)	35Ω to 90Ω	60mA to 100mA
DLP2AD (2 circuits array) p217	0804(2010)	35Ω to 280Ω	80mA to 150mA
DLP31D (2 circuits array) p219	1206(3216)	90Ω to 440Ω	70mA to 160mA
DLW21H p220	0805(2012)	67Ω to 180Ω	200mA to 330mA
DLW21S p222	0805(2012)	67Ω to 920Ω	160mA to 400mA
DLW31S p225	1206(3216)	90Ω to 2200Ω	200mA to 370mA
NFP0Q p226	025020(0605)	90Ω	100mA
DLW44S* p228	1515(4040)	100Ω to 2400Ω	1.1A to 3.1A
DLW5AH_SQ2/DLW5BS_SQ2* p229	2014(5036)/2020(5050)	190Ω to 4000Ω	200mA to 5A
DLW5AT_SQ2* p231	2014(5036)	110Ω to 2700Ω	1A to 5A
DLW5AT_MQ2* p233	2014(5036)	50Ω to 1100Ω	2A to 6A
DLW5AT_TQ2* p234	2014(5036)	110Ω to 500Ω	2A to 5A
DLW5BS_TQ2* p235	2020(5050)	500Ω to 800Ω	1A to 2A
DLW5BT_SQ2* p236	2020(5050)	100Ω to 1400Ω	1.5A to 6A
DLW5BT_TQ2* p237	2020(5050)	100Ω to 1400Ω	2A to 6A

* The derating of rated current is required for some items according to the operating temperature on each product page.

PL□

Large Current Common Mode Choke Coil for Automotive Available

Part Number	Size Code in inches (mm)	Common Mode Impedance (at 10MHz)	Rated Current
PLT5BPH* p238	2020(5050)	100Ω to 500Ω	3.1A to 5.6A
PLT10HH* p239	(12.9×6.6)	45Ω to 1000Ω	6A to 18A

* The derating of rated current is required for some items according to the operating temperature on each product page.

BNX

Block Type EMIFIL®

	Part Number	Rated Voltage	Rated Current
SMD Type	**BNX02□*** p256	6.3Vdc to 100Vdc	20A
Lead Type	**BNX01□*** p258	25Vdc to 50Vdc	15A

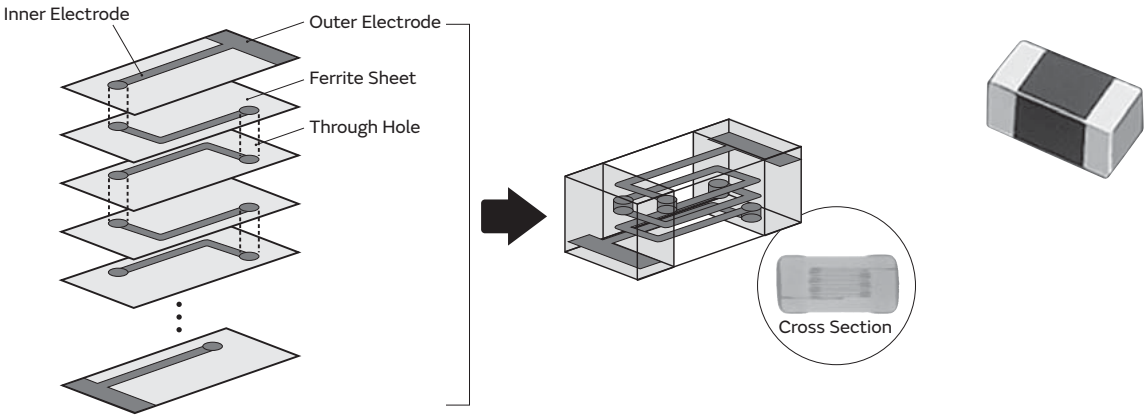
* The derating of rated current is required for some items according to the operating temperature on each product page.

MEMO

Chip Ferrite Bead
BLM/BLA/BLT Series

Chip Ferrite Bead (BL□) Series Introduction

●Example of Chip Ferrite Bead BLM Series Structure



●Lineup Classification of Chip Ferrite Bead

Noise Frequency Band: High ↑ / Low ↓

High-GHz Band

BLM_G series

BLM_GA	For high-speed signal lines
BLM_GG	For general signal lines

GHz Band

BLM_H series

BLM_HB, BLM_HD, BLM_HE, BLM_HG, BLM_HK	For high-speed signal lines / For general signal lines

BLM_E series

BLM_EG	For general signal lines and power supplies
BLM_EB	For general signal lines and power supplies

BLM standard lineup

BLM_RK	For digital interfaces
BLM_AG	For general signal lines
BLM_B□	For high-speed signal lines
BLM_AX	For general signal lines and power supplies

BLM_P/BLM_K/BLM_S/BLE series (for Power Lines)

BLM_P□, BLM_K□	Maximum 6A
BLM_S□	Maximum 12A
BLM_AX	For general signal lines and power supplies
BLE	Maximum 10A

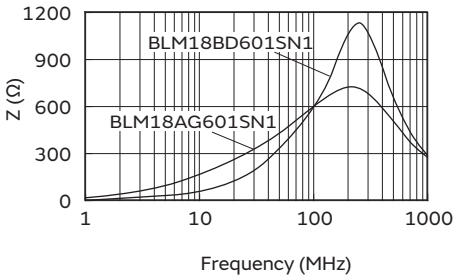
Small ← Rated Current → Large

Chip Ferrite Bead (BL□) Series Introduction

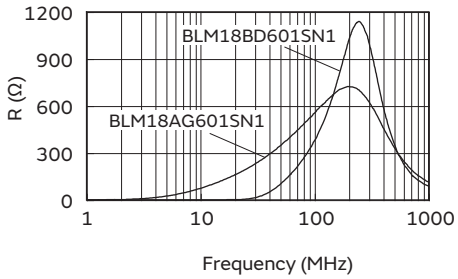
●Difference between BLM A type and B type (HG type vs HD/HB/HE type)

A type: Impedance curve rises from low frequency range. Suppresses noise in a wide frequency range.
B type: Impedance curve rises sharply. Less damage to signal waveforms.

Comparison of Impedance Curve

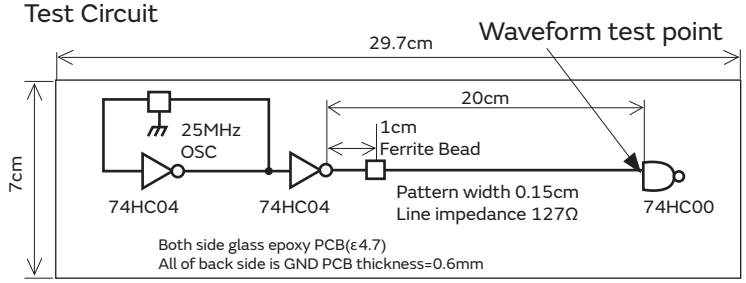


Comparison of Resistance Element



Comparison of Test Effect (25MHz)

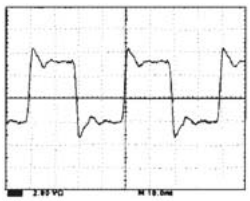
Test Circuit



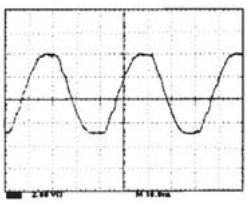
BLM_B Series has less damage to high-speed signal waveform.

Waveform

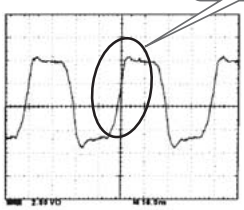
No filter



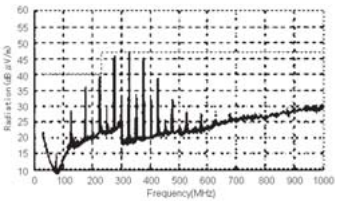
BLM18AG601SN1

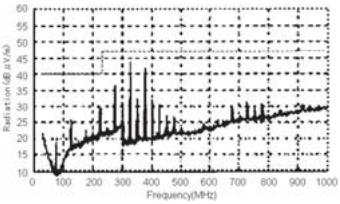


BLM18BD601SN1

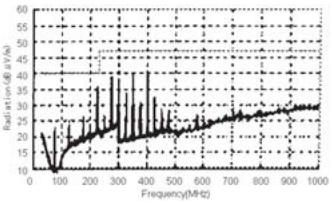


Spectrum





Spectrum has been reduced from low frequency range.



Noise frequency has been reduced without reducing signals of low frequency.

Part Numbering

Chip Ferrite Bead

(Part Number) BL M 18 AG 102 S N 1 D
❶ ❷ ❸ ❹ ❺ ❻ ❼ ❽ ❾

❶Product ID

Product ID	
BL	Chip Ferrite Beads

❷Type

Code	Type
A	Array Type
M	Ferrite Bead Single Type
T	Assembly Type

❹Characteristics/Applications

Code *1	Characteristics/Applications
AG	For General Use
AX	
TG	
BA	For High-speed Signal Lines
BB	
BC	
BD	
BX	
KD	For Power Lines
KG	
KN	
KX	
PD	
PG	
PX	
PT	
SD	
SG	
SN	
SP	
RK	For Digital Interface
HG	For GHz Band General Use
EB	For GHz Band High-speed Signal Lines (Low Direct Current Type)
EG	For GHz Band General Use (Low DC Resistance Type)
EX	
HB	For GHz Band High-speed Signal Lines
HD	
HE	
HK	For GHz Band Digital Interface
GA	For High-GHz Band High-speed Signal Lines
GG	For High-GHz Band General Use

*1 Frequency characteristics vary with each code.

❸Dimensions (LxW)

Code	Dimensions (LxW)	Size Code (inch)
02	0.4x0.2mm	01005
03	0.6x0.3mm	0201
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
2A	2.0x1.0mm	0804
21	2.0x1.25mm	0805
31	3.2x1.6mm	1206
41	4.5x1.6mm	1806
5B	5.0x5.0mm	2020

❺Impedance

Expressed by three figures. The unit is in ohm (Ω) at 100MHz. The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

❻Electrode

Expressed by a letter.

Ex.)

Code	Electrode
S/F/T	Sn Plating
A	Au Plating
L	Lead-Free Solder Plating

❼Category

Code	Category
N	For General-Purpose

❽Number of Circuits

Code	Number of Circuits
1	1 Circuit
4	4 Circuits

❾Packaging

Code	Packaging
K	Embossed Taping (ø330mm Reel)
L	Embossed Taping (ø180mm Reel)
B	Bulk
J	Paper Taping (ø330mm Reel)
D	Paper Taping (ø180mm Reel)

Series Lineup

BLM/BLA/BLT

Chip Ferrite Bead

Type	Size Code in inches (mm)	Thickness (mm)	Part Number	Impedance		Rated Current
				at 100MHz	at 1GHz	
For Power Lines	01005 (0402)	0.2	**BLM02PX100SN1** p26	10Ω±5Ω	-	1.1A

Chip Ferrite Bead (BLM□□AX Series) Feature Advantage

Excellent for Both Signal and Power Lines.
Multi Function Chip Ferrite Bead BLM□□AX Series

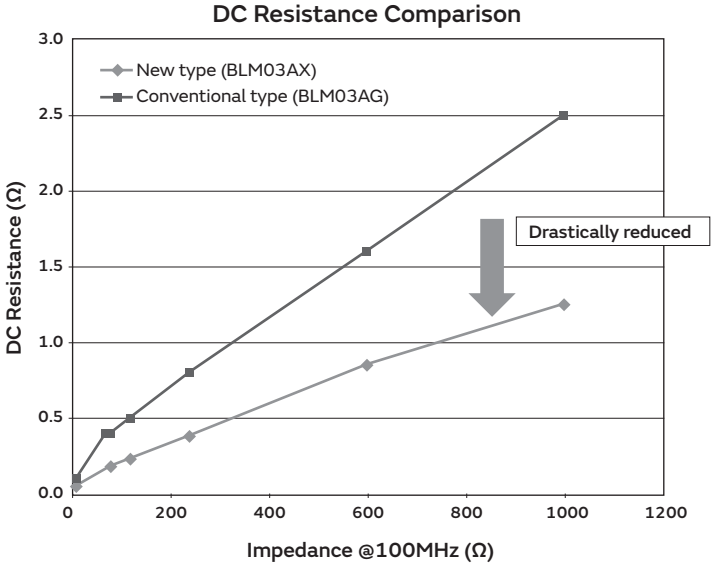
Feature

- 1/2 the DC resistance than conventional type utilizing the latest technology
  New ferrite material
  Optimum ferrite firing condition
  Fine piling technology
  Advanced coil pattern design technology
- Improved stability of performance at heat shock
- Wide line-up from 10 to 1000ohm(@100MHz) useful for signal line

Advantage

- High Rated Current
  Good for miniaturization of high power equipment
- Lower Voltage down at Ferrite bead
  Good for Battery driven equipment by saving running voltage margin
- Higher Reliability

Drastically Reduced DC Resistance



Test Result - Heat Shock

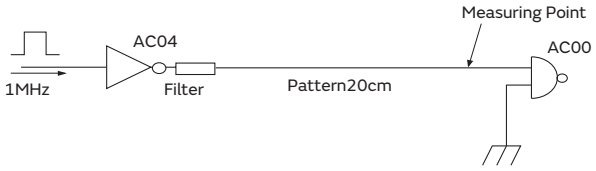
Chip Ferrite Bead (BLM□□R Series) EMI Suppression Effect

Waveform Distortion Suppressing Performance of BLM□□R Series

Measuring Circuits



Type of Filter	EMI Suppression Effect / Description
Initial (No filter)	**Signal waveform (100nsec/div, 2V/div)** **Expand (10nsec/div, 2V/div)** **Spectrum**  Ringing is caused on the signal waveform. Such ringing contains several hundred MHz harmonic components and generates noise.
Resister (47Ω) is used	**Signal waveform (100nsec/div, 2V/div)** **Expand (10nsec/div, 2V/div)** **Spectrum**  Comparing initial waveform, ringing is suppressed a little. However, high level waveform distortion still remains.
BLM18RK221SN1 (220Ω at 100MHz) is used	**Signal waveform (100nsec/div, 2V/div)** **Expand (10nsec/div, 2V/div)** **Spectrum**  BLM18R has excellent performance for noise suppression and waveform distortion suppression. BLM18R suppresses drastically not only the spectrum level in more than 100MHz range but waveform distortion.

Derating of Rated Current

Notification about terminal connection

Connect terminal rightly.
This product consists of two coils. When it is connected to the same power source line and used as a coil, its inherent properties can be obtained. When it is connected to separate power source lines, serious trouble such as open or short circuit or flames due to extreme heat generation occurs.

Chip Ferrite Bead (BLM/BLA/BLT) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
   Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
2. About Excessive Surge Current
   Surge current (pulse current or rush current) higher than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise. Please contact us in advance in case of applying surge current.

Soldering and Mounting

- Self-heating
  Please pay special attention when mounting chip ferrite beads BLM_AX/P/K/S series BLT series in close proximity to other products that radiate heat.
  The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

Notice

Storage and Operating Conditions

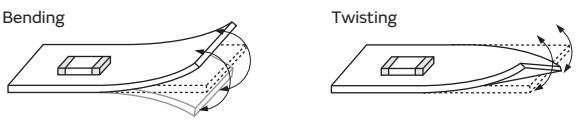
<Operating Environment>
Do not use products in a corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases (a sea breeze, Cl_2, H_2S, NH_3, SO_2, NO_2, etc.).
Do not use products in an environment close to an organic solvent.
<Storage and Handling Requirements>
1. Storage Period
   BLM15E/15H/15G · BLT series should be used within 12 months; the other series should be used within 6 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40˚C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product can be caused by the cleaning method. When you clean in conditions that are not in the mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.
3. Other
   Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Handling

1. Resin Coating
   Using resin for coating/molding products may affect the product's performance.
   So please pay careful attention in selecting resin.
   Prior to use, please make a reliability evaluation with the product mounted in your application set.
2. Handling of Substrates
   After mounting products on a substrate, do not apply any stress to the product by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening a screw to the substrate.
   Excessive mechanical stress may cause cracking in the product.



Chip Ferrite Bead (BLM/BLA/BLT) Soldering and Mounting

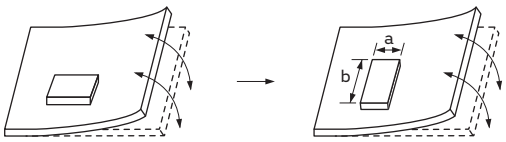
Continued from the preceding page.↘

(in mm)

Series	Standard Land Dimensions
BLT	●Reflow Soldering 
● PCB Warping

PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip ferrite beads and bead inductors, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the chip ferrite beads and bead inductors, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, it may overflow into the land or termination areas and yield poor solderability.
In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during the flow soldering process.

(in mm)

Series	Solder Paste Printing	Adhesive Application
BLM	●Ensure that solder is applied smoothly to a minimum height of 0.2mm to 0.3mm at the end surface of the part. ●Guideline of solder paste thickness: 50-80μm: BLM02 100-150μm: BLM03 100-200μm: BLM15/18/21/31/41 	**BLM18/21/31/41 Series (except for BLM18G Series)** Coating amount is illustrated in the following diagram. 3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip ferrite beads and bead inductors.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products. If using BLA series with Sn-Zn based solder, please contact Murata in advance.

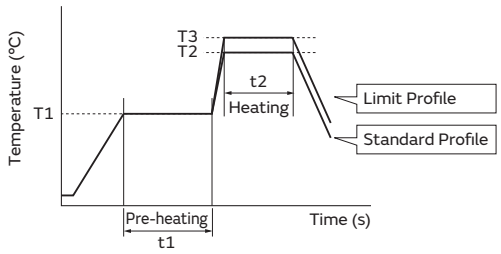
Flux:

- Use rosin based flux.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time (t1)	Temp. (T2)	Time (t2)		Temp. (T3)	Time (t2)

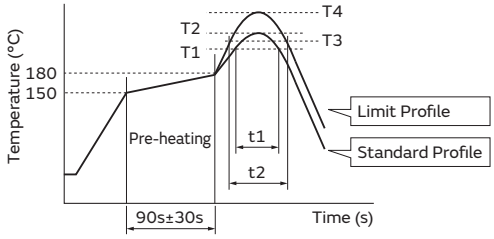
Continued on the following page. ↗

Chip Ferrite Bead (BLM/BLA/BLT) Soldering and Mounting

Continued from the preceding page.↘

●Reflow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak Temperature (T2)	Cycle of Reflow	Heating		Peak Temperature (T4)	Cycle of Reflow
	Temp. (T1)	Time (t1)			Temp. (T3)	Time (t2)		
BLM BLA	220°C min.	30 to 60s	245±3°C	2 times max.	230°C min.	60s max.	260°C/10s	2 times max.
BLT					240°C min.	30s max.		

(3) Reworking with a soldering Iron

The following conditions must be strictly followed when using a soldering iron (except for BLM02 Series).
Pre-heating: 150°C 60s min.
Soldering iron power output / Tip diameter:
80W max. / ø3mm max.
Temperature of soldering iron tip / Soldering time / Times:
350°C max. / 3-4s / 2 times
Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

The following conditions should be observed when cleaning chip ferrite beads.

(1) Cleaning temperature: 60°C max. (40°C max. for alcohol type cleaner)
(2) Ultrasonic
Output: 20W/liter max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
(3) Cleaning Agent
The following cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
Do not clean BLT series.
In case of cleaning, please contact Murata engineering.
(a) Alcohol cleaning agent
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agent
Pine Alpha ST-100S
(4) Ensure that flux residue is completely removed.
The component should be thoroughly dried after the aqueous agent has been removed with deionized water.
(5) BLM_G type is processed with resin. On rinsing the product, using water for ultrasonic cleaning may affect the resin quality used for the product by water element.
In case of set cleaning conditions, please make a reliability evaluation according to the cleaning conditions.

Z	Inductor Type

❸Dimensions (LxW)

Code	Dimensions (LxW)	Size Code (inch)
03	0.6x0.3mm	0201
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
2M	2.0x1.6mm	0806
2H	2.5x2.0mm	1008
32	3.2x2.5mm	1210
5B	5.0x5.0mm	2020

❹Features

Code	Features
SM	For Audio Lines Multilayer Type
SW	For Audio Lines Wire Wound Type
BW	For LED Lines Wire Wound Type
BM	For LED Lines Multilayer Type
SG	For Audio Lines Multilayer Type (For GHz Band Use)

❺Impedance

Expressed by three figures. The unit is in ohm (Ω). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

❻Inductance Tolerance

Code	Features
S	For General Use (Sn Plating)
H	For General Use (LF Solder) *1
L	For General Use (LF Solder)

*1 NFZ32SW/32BW_H□1 only.

❼Category

Code	Category
N	For General-Purpose

❽Number of Circuits

Code	Number of Circuits
1	1 Circuit

❾Specification

Code	Specification
0	Standard Type
1	Low Rdc Type

❿Packaging

03	0.6×0.3mm	0201

❸Target Frequency

Code	Target Frequency
J	700MHz
R	2.4GHz
V	5GHz

❹Characteristics Classification

❺Impedance at Target Frequency

Expressed by three figures. The unit is in ohm (Ω).
The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

❻Chip Shape/Electrode

Expressed by a letter.

Code	Chip Shape/Electrode
G	High Profile (Sn Plating/5 Surface Electrode)
S	Standard (Sn Plating/5 Surface Electrode)

❼Category

Code	Category
N	For General-Purpose

❽Rated Current

Code	Rated Current
E	500mA max.
G	1A max.
L	2A max.

❾Packaging

Code	Packaging
E	Embossed Taping (ø180mm Reel*1)
B	Bulk
D	Paper Taping (ø180mm Reel)

*1 Width 8mm

Chip Power Bead

15	1.0x0.5mm	0402
18	1.6x0.8mm	0603

❹Applications and Characteristics

Code	Series	Applications and Characteristics
C	**LQW**	for Choke

❺Category

Code	Category	
A	General	Impedance Device (Near GHz Band)

❻Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "**R**." In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "**N**," and the unit of inductance is nano-henry (nH).
The capital letter "**N**" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits.

❼Inductance Tolerance

Code	Inductance Tolerance
J	±5%
K	±10%

❽Features

Code	Features	Series
0	Standard Type	**LQW**

Impedance-Frequency Characteristics (Typ.)

Application Specified Noise Filter (NFZ_S/NFZ_B/BLF/BLE) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
   Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
2. About Excessive Surge Current
   Surge current (pulse current or rush current) higher than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise. Please contact us in advance in case of applying surge current.

Soldering and Mounting

- Self-heating
  Please pay special attention when mounting NFZ03 series in close proximity to other products that radiate heat. The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

Notice

Storage and Operating Conditions

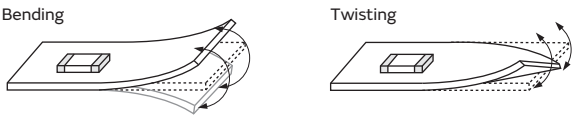
<Operating Environment>
Do not use products in a corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases (a sea breeze, Cl_2, H_2S, NH_3, SO_2, NO_2, etc.).
Do not use products in an environment close to an organic solvent.
<Storage and Handling Requirements>
1. Storage Period
   NFZ32B/S · NFZ5B series should be used within 12 months; the other series should be used within 6 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40˚C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product can be caused by the cleaning method. When you clean in conditions that are not in the mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.
3. Other
   Noise suppression levels resulting from Murata's EMI suppression filters EMIFILr may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Handling

1. Resin Coating
   Using resin for coating/molding products may affect the product's performance.
   So please pay careful attention in selecting resin.
   Prior to use, please make a reliability evaluation with the product mounted in your application set.
2. Handling of Substrates
   After mounting products on a substrate, do not apply any stress to the product by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening a screw to the substrate.
   Excessive mechanical stress may cause cracking in the product.



Inductor for Audio Line Noise Suppression (LQW_CA) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
   Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

Notice

Storage and Operating Conditions

<Operating Environment>
Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
<Storage Requirements>
1. Storage Period
   The LQW_CA series should be used within 12 months. Check solderability if this period is exceeded.
2. Storage Conditions
   (1) Store products in a warehouse in compliance with the following conditions:
   Temperature: -10 to +40°C.
   Humidity: 15 to 85% (relative humidity)
   Do not subject products to rapid changes in temperature and humidity.
   Do not store them in a chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.
   This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.
   (2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
   (3) Store products on pallets to protect from humidity, dust, etc.
   (4) Avoid heat shock, vibration, direct sunlight, etc.

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.
LQW_C series

- To prevent breaking the wire, avoid touching the wire wound portion with sharp materials, such as tweezers or the bristles of a cleaning brush.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, a support pin pushes the components up from the bottom of the base tape. In this case, please remove the support pin. The support pin may damage the components and break the wire.
- In rare cases, the laser recognition cannot recognize this component. Please contact us when you use laser recognizion. (There is no problem with the permeation and reflection type.)
- The product temperature rises about 40°C maximum when the permissible current is applied to LQW15C/LQW18C. Please use caution regarding the temperature of the substrate and air around the part.

<Transportation>
Do not apply excessive vibration or mechanical shock to products.
<Resin Coating>
When coating products with resin, the relatively high resin curing stress may change inductance values.
For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.
(LQW series)
An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.
<Rated Current>

- Rated Current Based on Temperature Rise
  Please refer to individual specifications.

Continued on the following page. ↗

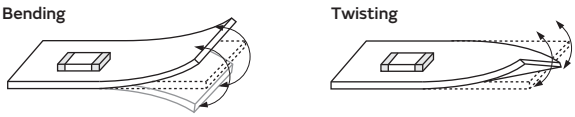
Inductor for Audio Line Noise Suppression (LQW_CA) ⚠Caution/Notice

Continued from the preceding page.↘

<Handling of Substrates>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

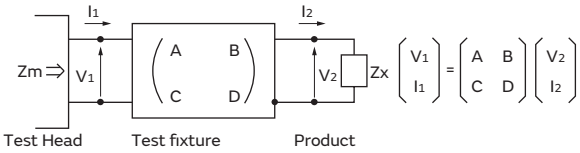
Excessive mechanical stress may cause cracking in the product.



Measuring Method

Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixtures can be described by F-parameter as shown in the following:



2. The impedance of chip inductors (chip coils) Zx and measured value Zm can be described by input/output current/voltage.

$$Zm = \frac{V_1}{I_1} \quad , \quad Zx = \frac{V_2}{I_2}$$

3. Thus, the relation between Zx and Zm is shown in the following:

$$Zx = \alpha \frac{Zm - \beta}{1 - Zm\Gamma}$$

where, $\alpha = D / A = 1$

$\beta = B / D = Zsm - (1 - Yom\ Zsm)\ Zss$

$\Gamma = C / A = Yom$

Zsm: measured impedance of short chip
Zss: residual impedance of short chip*
Yom: measured admittance when opening the fixture

*Residual inductance of short chip

Residual Inductance	Series
0.556nH	**LQW04CA/15CA**
0.771nH	**LQW18CA**

4. Lx should be calculated with the following equation.

$$Lx = \frac{Im\ (Zx)}{2\pi f}$$

Lx: Inductance of chip Inductors (chip coils)
f: Measuring frequency

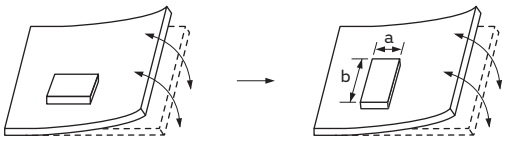
● PCB Warping

PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



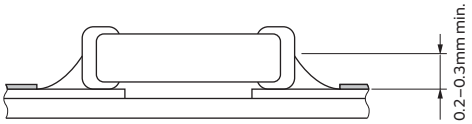
2. Solder Paste Printing and Adhesive Application

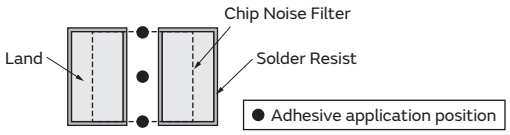
When reflow soldering the application specified noise filter, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the application specified noise filter, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, it may overflow into the land or termination areas and yield poor solderability.
In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during the flow soldering process.

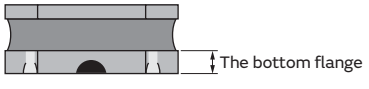
(in mm)

Series	Solder Paste Printing	Adhesive Application
BLE	●Guideline of solder paste thickness: 50-80μm: BLF02/03 100-150μm: NFZ03/2H/2M/32/5B 100-200μm: NFZ15/18 · BLE18/32	**NFZ5B** To prevent detachment of the product, 3-point adhesive application is recommended.





Amount of adhesive applied is a standard 1/2 to 2/3 of the bottom flange thickness.



Continued on the following page.↗

Application Specified Noise Filter (NFZ_S/NFZ_B/BLF/BLE) Soldering and Mounting

Continued from the preceding page.↘

3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip ferrite beads and bead inductors.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products.
If using BLA series with Sn-Zn based solder, please contact Murata in advance.

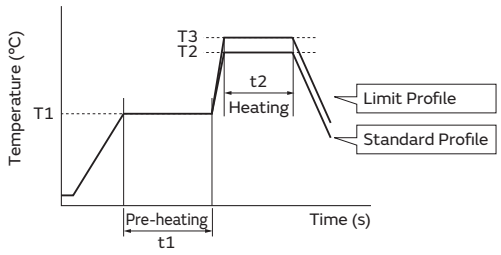
Flux:

- Use rosin-based flux.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

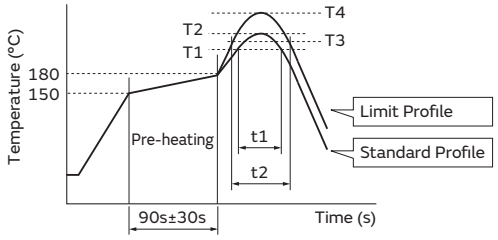
●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time (t1)	Temp. (T2)	Time (t2)		Temp. (T3)	Time (t2)	
NFZ (except for **NFZ03/15/18/2M/32SW**)	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.
BLE								1 time *1

*1 NFZ5B/32BW

●Reflow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak Temperature (T2)	Cycle of Reflow	Heating		Peak Temperature (T4)	Cycle of Reflow
	Temp. (T1)	Time (t1)			Temp. (T3)	Time (t2)		
NFZ **BLF02/03** **BLE**	220°C min.	30 to 60s	245±3°C	2 times max.	230°C min.	60s max.	260°C/10s	2 times max.

Continued on the following page.↗

Application Specified Noise Filter (NFZ_S/NFZ_B/BLF/BLE) Soldering and Mounting

Continued from the preceding page.↘

(3) Reworking with a soldering Iron

The following conditions must be strictly followed when using a soldering iron (except for NFZ03 · BLF02).
Pre-heating: 150°C 60s min.
Soldering iron power output / Tip diameter:
80W max. / ø3mm max.
Temperature of soldering iron tip / Soldering time / Times:
350°C max. / 3-4s / 2 times
Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

The following conditions should be observed when cleaning chip ferrite beads.

(1) Cleaning temperature: 60°C max. (40°C max. for alcohol type cleaner)

(2) Ultrasonic
Output: 20W/liter max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz

(3) Cleaning Agent
The following cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
(a) Alcohol cleaning agent
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agent
Pine Alpha ST-100S (except for NFZ5B)

(4) Ensure that flux residue is completely removed.
The component should be thoroughly dried after the aqueous agent has been removed with deionized water.

Inductor for Audio Line Noise Suppression (LQW_CA) Soldering and Mounting

1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip Inductor's (chip coil's) electrode.

Land Pattern + Solder Resist Land Pattern Solder Resist

(in mm)

Series	Standard Land Dimensions
LQW04CA **LQW15CA** **LQW18CA**	
Part Number	a	b	c
LQW04CA	0.45	1.05	0.48
LQW15CA	0.45	1.45	0.64
LQW18CA	0.7	2.2	1.0

Attention should be paid to potential magnetic coupling effects when using the Inductor (coil) as a resonator.

2. Standard Soldering Conditions

(1) Soldering method

Please use reflow soldering.

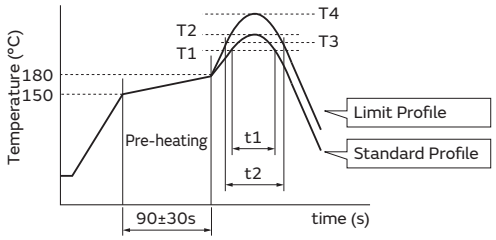
Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).
Do not use water-soluble flux.
The flux used for the LQW04CA/15CA/18CA series should be a rosin-based flux that includes a middle activator equivalent to 0.06wt% to 0.1wt% chlorine.

For additional mounting methods, please contact Murata.

(2) Soldering profile

●Reflow Soldering profile
(Sn-3.0Ag-0.5Cu solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time (t1)			Temp. (T3)	Time (t2)		
LQW04CA/15CA/18CA	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.

(3) Reworking with a Soldering Iron (except for LQW04C)

Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

Soldering iron power output: 80W max.
Temperature of soldering iron tip: 350°C
Diameter of soldering iron end: 3.0mm max.
Soldering time: within 3s

Please keep the fix time with the soldering iron within 2 times.

Continued on the following page.↗

Inductor for Audio Line Noise Suppression (LQW_CA) Soldering and Mounting

Continued from the preceding page.↘

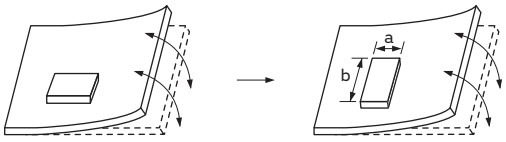
3. Mounting Instructions

(1) Land Pattern Designing (LQW_C series)
Please follow the recommended patterns. Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in “position shift” in the soldering process.

(2) Magnetic Coupling
Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling.

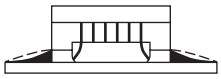
(3) PCB Warping
The PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to mechanical stress.



Poor example　　Good example

(4) Amount of Solder Paste
Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that the correct amount is applied.
Guideline of solder paste thickness
- LQW15C: 50 to 100μm
- LQW04C: 80 to 100μm
- LQW18C: 100 to 150μm



LQW_C

Continued on the following page.↗

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

(1) Cleaning temperature: 60°C max. (40°C max. for alcohol cleaning agents)

(2) Ultrasonic
Output: 20W/l max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent
The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.
(a) Alcohol cleaning agents
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agents
Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.
The component should be thoroughly dried after the aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

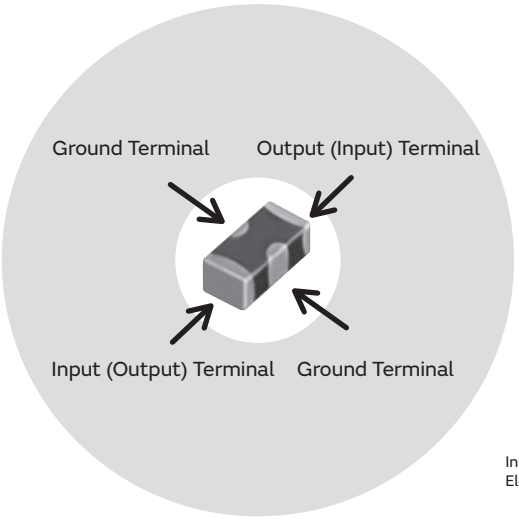
MEMO

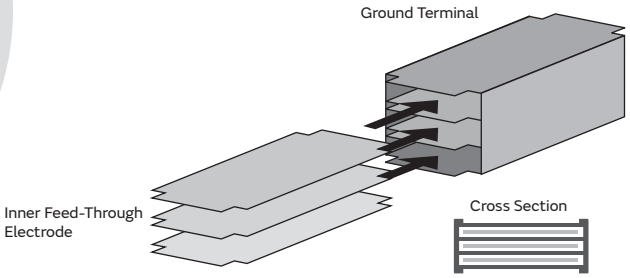
Chip EMIFIL®
NFL/NFA/NFW/NFE Series

Chip EMIFIL® (NF□) Series Introduction



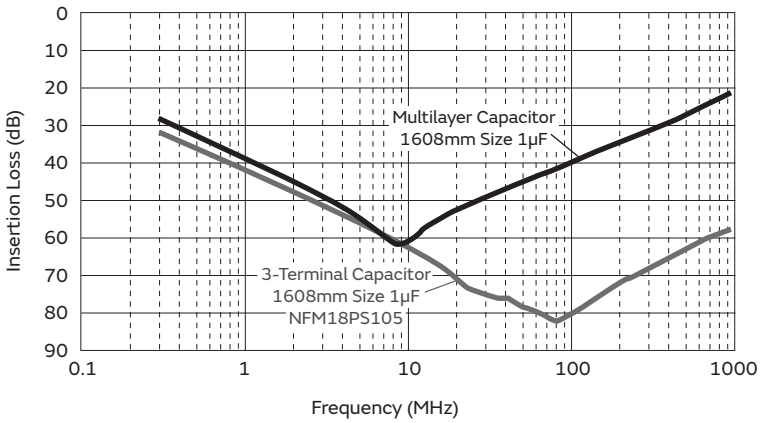
Example of 3-Terminal Capacitor Structure

Chip 3-terminal capacitor is a chip-shaped 3-terminal capacitor designed for noise suppression. Its inner structure, like a feed-through capacitor, makes its ground impedance quite low. Owing to this structure, the 3-terminal capacitor has a good noise suppression effect at a high frequency range up to several hundred MHz.



Series	Equivalent Circuit	Part Number
NFM Series (3-terminal capacitor)		**NFM18CC** **NFM21CC** **NFM18PC** **NFM18PS** **NFM21PC**
NFL / NFW / NFA Series (LC filter)		**NFL18ST**
		**NFL18SP** **NFL21SP** **NFW31SP**
		**NFA21SL** **NFA18SL** **NFA18SD**
NFE Series (Feed-through capacitor with ferrite cores)		**NFE31PT** **NFE61PT**

Chip EMIFIL® (NF□) Series Introduction



Insertion Loss Sample	Features	Classification		Applications	Example
	Standard of 3-terminal capacitor	**NFM_CC**	Standard type with varied capacitance	Noise suppression in low speed signal lines	· Low speed interface lines · Sensor
		NFM_PC	Meet large current, high capacitance available, for power lines	Noise suppression in power lines	· Individual IC power lines
	Sharp insertion loss curve enables low damage to signal waveform	**NFL_ST**	T-type filter, effective in low impedance circuits	Noise suppression in high-speed signal lines	· High-speed interface lines · Bus lines LCD lines Camera I/Fs · High-speed analog lines RGB / D terminal
		NFL_SP	π-type filter, effective in high impedance circuits		
		NFW_SP	π-type filter, designed for low impedance circuits		
		NFA_SL	4-line array, suitable for bus lines or flat cables		
	Meets large current, good high frequency performance because of its feed-through structure			Noise suppression in power lines / low impedance lines	· Various power lines · Sensor

Insertion Loss Characteristics

Chip EMIFIL® (NFL/NFA/NFW/NFE) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Notice

Storage and Operating Conditions

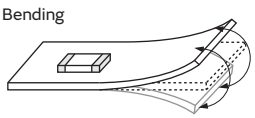
<Operating Environment>
Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
Do not use products in an environment close to an organic solvent.
<Storage and Handling Requirements>
1. Storage Period
Should be used within 12 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
(1) Storage temperature: -10 to +40˚C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

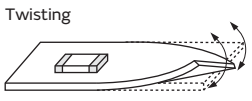
Notice (Soldering and Mounting)

1. Cleaning
Failure and degradation of a product can be caused by the cleaning method. When you clean in conditions that are not in the mounting information, please contact Murata engineering.
2. Soldering
Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.
3. Other
Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Handling

1. Resin Coating
Using resin for coating/molding products may affect the product's performance.
So please pay careful attention in selecting resin.
Prior to use, please make a reliability evaluation with the product mounted in your application set.
2. Caution for Use (NFW Series)
When you hold products with a tweezer, please hold by the sides. Sharp materials, such as a pair of tweezers or other material such as cleaning brush bristles, should not touch the winding portion of this product to prevent breaking the wire. To prevent breaking the core, mechanical shock should not be applied to the products mounted on the board.
3. Handling of Substrates
After mounting products on a substrate, do not apply any stress to the product by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening a screw to the substrate.
Excessive mechanical stress may cause cracking in the product.





Chip EMIFIL® (NFL/NFA/NFW/NFE) Soldering and Mounting

1. Standard Land Pattern Dimensions

NF□ series suppresses noise by conducting the high-frequency noise element to ground. Therefore, to obtain maximum performance from these filters, the ground pattern should be made as large as possible during the PCB design stage. As shown below, one side of the PCB is used for chip mounting, and the other is used for grounding.
Small diameter feed-through holes are then used to connect the grounds on each side of the PCB. This reduces the high-frequency impedance of the grounding and maximizes the filter's performance.

Land Pattern + Solder Resist
Land Pattern Solder Resist
(in mm)

Series	Standard Land Dimensions

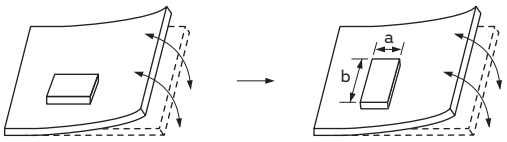
Continued from the preceding page.↘

● PCB Warping

PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



Poor example　　Good example

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip EMI suppression filter, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the EMI suppression filter, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, it may overflow into the land or termination areas and yield poor solderability.
In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during the flow soldering process.

NFW31SP **NFE31PT**	●Guideline of solder paste thickness: 150-200μm 	**NFW31SP Series** Apply 0.2mg of bonding agent at each chip. NFE61PT	●Guideline of solder paste thickness: 150-200μm 	Apply 1.0mg of bonding agent at each chip. 
3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip EMI suppression filters.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products.

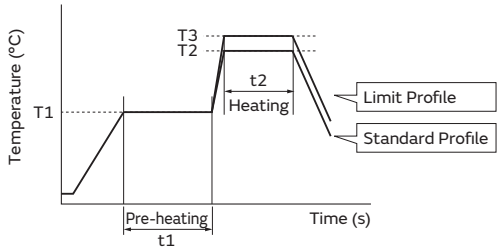
Flux:

- Use rosin-based flux.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time (t1)	Temp. (T2)	Time (t2)		Temp. (T3)	Time (t2)	
NFE61PT	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.
NFW31SP	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	1 times max.

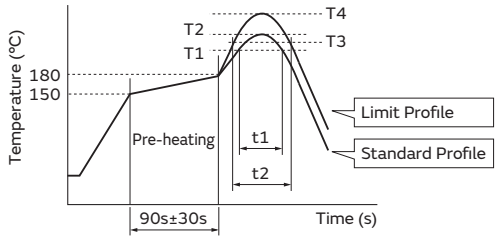
●Reflow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak Temperature (T2)	Cycle of Reflow	Heating		Peak Temperature (T4)	Cycle of Reflow
	Temp. (T1)	Time (t1)			Temp. (T3)	Time (t2)		
NFA18S/21S NFE, NFL	220°C min.	30 to 60s	245±3°C	2 times max.	230°C min.	60s max.	260°C/10s	2 times max.
NFW31SP	220°C min.	30 to 60s	245±3°C	2 times max.	230°C min.	60s max.	260°C/10s	1 times max.

(3) Reworking with a soldering Iron
The following conditions must be strictly followed when using a soldering iron.
Pre-heating: 150°C 60s min.
Soldering iron power output / Tip diameter:
30W max. / ø3mm max.
Temperature of soldering iron tip / Soldering time / Times:
350°C max. / 3-4s / 2 times*1
*1 NFE31PT152Z1E9: 280°C max. / 10s max. / 2 times

Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

The following conditions should be observed when cleaning chip EMI filters.
(1) Cleaning temperature: 60°C max. (40°C max. for alcohol type cleaner)
(2) Ultrasonic
Output: 20W/liter max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
(3) Cleaning Agent
The following cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
(a) Alcohol cleaning agent
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agent
Pine Alpha ST-100S
(4) Ensure that flux residue is completely removed.
The component should be thoroughly dried after the aqueous agent has been removed with deionized water.

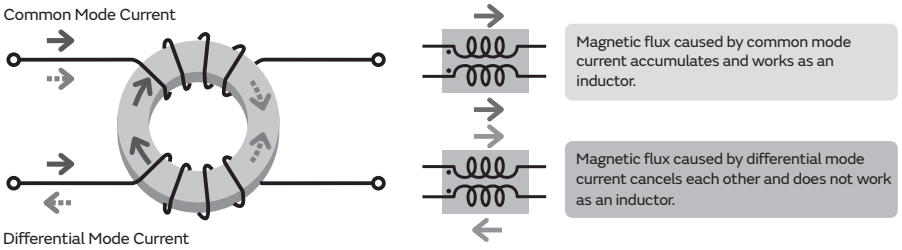
"Minimum Quantity" means the number of units of each delivery or order. The quantity should be an integral multiple of the "Minimum Quantity."

Common Mode Choke Coil · Common Mode Noise Filter DLM/DLP/DLW/NFP/PLT Series

Common Mode Choke Coil/Common Mode Noise Filter (DL□/NFP/PLT) Series Introduction



Category	Features, Classification	Structure	Part Number	Comments
For signal lines	Ultra-high cut-off frequency for high-speed differential signal lines	Multilayer type	**DLM0QSB_HY2** **DLM0NSB_HY2**	· High common impedance for outstanding noise control effectiveness.
		Film type	**NFP0QHB_HS2** **NFP0QSB_HL2** **DLP0QSA** **DLP0NSA** **DLP11SA** **DLP11RB** **DLP11TB** **DLP2ADA**	· Low profile, small size, suitable for mobile equipment. · Tight terminal pitch enables high-density layout. · Very high cut-off frequency and its matching to characteristic impedance enable good transmission of high-speed signals. · DLP2ADA is an array-type product incorporating two circuits.
		Winding type	**DLW21SN_HQ2** **DLW21HN_HQ2** **DLW21SN_XK2** **DLW21SN_XQ2**	· Very high self-resonance frequency enables high cut-off frequency. · Its matching to characteristic impedance enables good transmission of high-speed signals. · DLW21HN_HQ2 is designed to be low profile.
	High cut-off frequency for high-speed differential signal lines	Multilayer type	**DLM11SN_HY2** **DLM0QSN** **DLM0NSN**	· Enables noise suppression for differential signal lines without distortion in high-speed signal transmission. · High cut-off frequency and its matching to characteristic impedance enable good transmission of high-speed signals.
		Film type	**DLP0NSC** **DLP0NSN**	· Low profile, small size, suitable for mobile equipment. · Tight terminal pitch enables high-density layout. · High cut-off frequency and its matching to characteristic impedance enable good transmission of high-speed signals.
			DLP11SN **DLP11RN**	· Low profile, small size, suitable for mobile equipment. · High cut-off frequency enables good transmission of high-speed signals. · DLP11RN has low DC resistance to reduce attenuation of the signal.
			DLP1NDN **DLP2ADN**	· Array-type product incorporating two circuits. · Very high cut-off frequency and its matching to characteristic impedance enable good transmission of high-speed signals.
		Winding type	**DLW21SN_SQ2** **DLW21HN_SQ2** **DLW21SN_SK2** **DLW31SN**	· High impedance in the high frequency band for more effective noise suppression. · High self-resonance frequency enables high cut-off frequency. · DLW21HN_SQ2 is designed to be low profile.
			DLW21SR	· Matches the characteristic impedance to enable good transmission of high-speed signals. · Particularly suitable for the receiving side of the HDMI interface.
	For general differential signal lines	Film type	**DLP31SN** **DLP31DN**	· High common impedance for outstanding noise control effectiveness. · DLP31D is an array-type product incorporating two circuits.
For power lines		Winding type	**DLW44SM**	· Supports large currents (3.1 A max.) and is designed to be low profile.
			DLW5AHN **DLW5BSM** **DLW5ATN** **DLW5BTM**	· Supports large currents (6 A max.), suitable for input connector from an AC adaptor. · DLW5AT/DLW5BT is designed to be low profile.
For audio lines		Multilayer type	**DLM11GN**	· Modified differential mode impedance is higher than other common mode choke coils; this feature makes it possible to suppress both common mode and differential mode noise. · Ideal to maintain low distortion audio signals.
For power lines	Large current automotive available	Winding type	**PLT5BPH**	· Highly reliable and supports large currents (up to 5.6 A). · Suitable for power lines for ADAS, IVI, and similar systems.
		Winding type cased structure	**PLT10HH**	· Highly reliable and supports large currents (up to 18 A). · Suitable for power lines for DC-DC converters and other electrical components in motors, HEVs, and Evs.

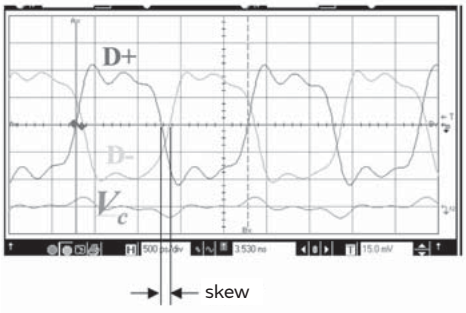
Common Mode Choke Coil/Common Mode Noise Filter (DLP/DLW Series) Noise Suppression Example

Skew Improvement Effect of Common Mode Choke Coil

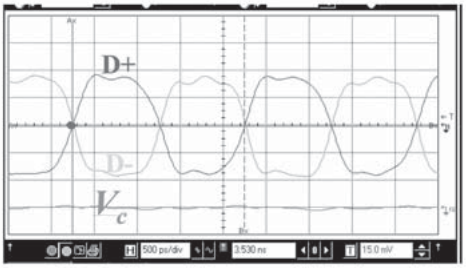
Example of Skew Improvement by Common Mode Choke Coil
(Tested using pulse generator waveform)

Waveform is equivalent to 1000Mbps signal

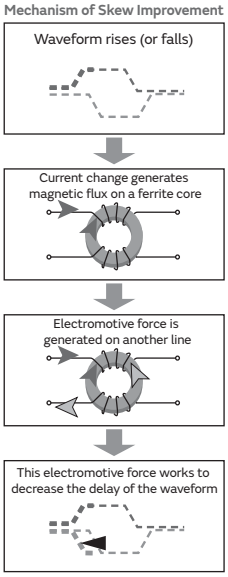
Waveform with intentionally made skew (skew: 100ps)



Skew is improved by common mode choke coil

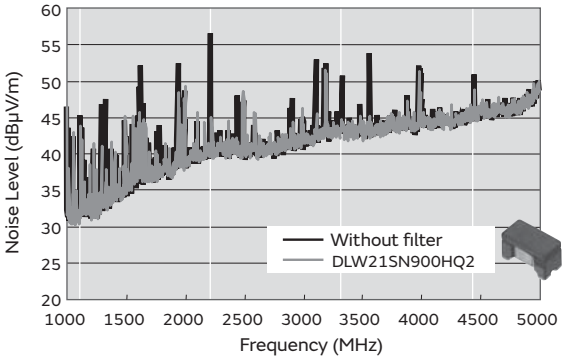


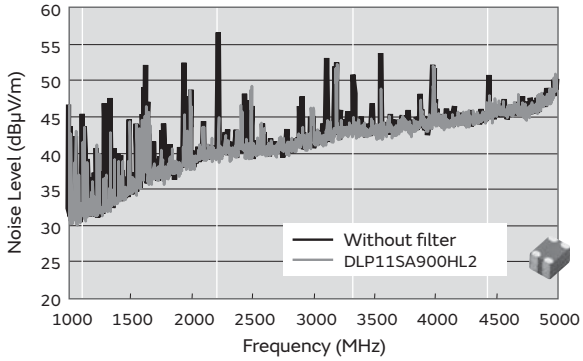
Mechanism of Skew Improvement



Noise Suppression of Common Mode Choke Coil in HDMI Line

Device under test / Transmitter: game machine
/ Receiver: projector
/ Cable: HDMI category 2 3m cable
Test resolution / 1080p Deep color 12bit (Data 1.11GHz) DVD play mode

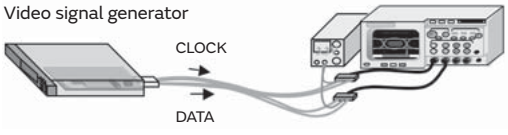


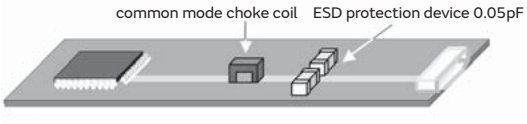


Test Example of HDMI 1.3 Waveform Transmission

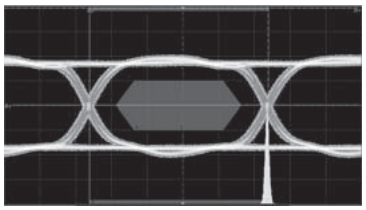
~Using ESD protection device
LXES15AAA1-100 (0.05pF)~

Signal frequency: 1.11GHz (Deep color 12bit)





ESD protection device only



Film Type DLP11SN900HL2
(Cut-off frequency is lowest in the table below)

	Wound Type DLW21SN900HQ2	Film Type DLP11SA900HL2	Film Type Array DLP2ADN900HL4
Cut-off Frequency	Over 10GHz	Around 6GHz	Around 4GHz
Judgment	Specification satisfied	Specification satisfied	Specification satisfied
Transition Time	Rise time: 83.4ps Fall time: 77.4ps	Rise time: 90.4ps Fall time: 85.5ps	Rise time: 100ps Fall time: 97.4ps

Each common mode choke coil can keep the waveform and satisfy the specification.

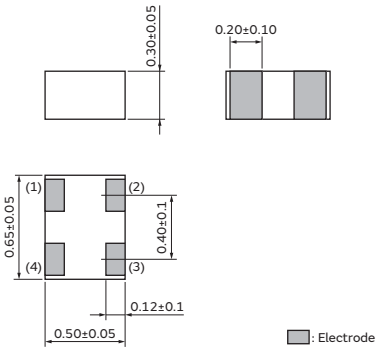
Common mode choke coil/Common mode noise filter

DLM0QS Series 025020/0605(inch/mm)

Use for differential signal interface line.

Appearance/Dimensions

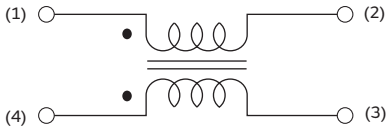


(in mm)

Packaging

Code	Packaging	Minimum Quantity
D	ø180mm Paper Tape	15000
B	Bulk(Bag)	500

Equivalent Circuit



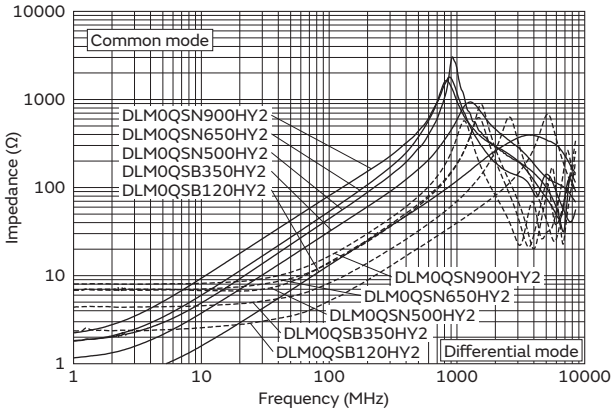
No Polarity.

Rated Value (□: packaging code)

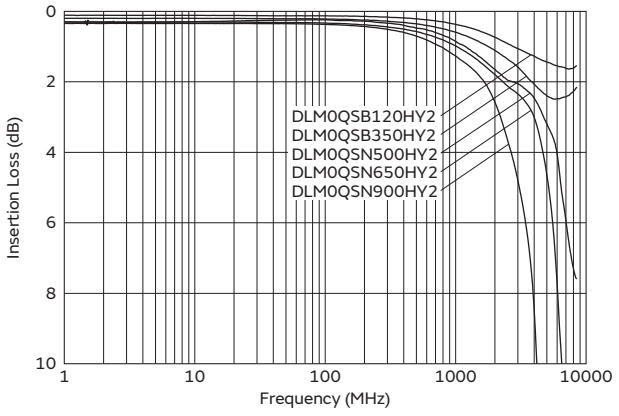
Part Number	Common Mode Impedance at 100MHz	Cutoff Frequency	Rated Current	Rated Voltage	Insulation Resistance (Min.)	Withstanding Voltage	DC Resistance
DLM0QSB120HY2□	12Ω±5Ω	8.0GHz (Typ.)	150mA	5Vdc	10MΩ	12.5Vdc	1.6Ω±25%
DLM0QSB350HY2□	35Ω±30%	8.0GHz (Typ.)	120mA	5Vdc	10MΩ	12.5Vdc	2.3Ω±25%
DLM0QSN500HY2□	50Ω±35%	4.0GHz (Typ.)	100mA	5Vdc	10MΩ	12.5Vdc	3.6Ω±25%
DLM0QSN650HY2□	65Ω±35%	4.0GHz (Typ.)	100mA	5Vdc	10MΩ	12.5Vdc	3.6Ω±25%
DLM0QSN900HY2□	90Ω±25%	2.0GHz (Typ.)	50mA	5Vdc	10MΩ	12.5Vdc	4.0Ω±25%

Operating Temp. Range: -40°C to 85°C

Z-f Characteristics: DLM0QS_HY2 Series



Differential mode transmission characteristics: DLM0QS_HY2series



Common mode choke coil/Common mode noise filter

DLM0NS Series 03025/0806(inch/mm)

Use for differential signal interface line.

Please apply the derating curve shown in chart according to the operating temperature.

Derating of Rated Current

Common Mode Choke Coil/Common Mode Noise Filter (DLM/DLP/DLW/NFP) ⚠Caution/Notice

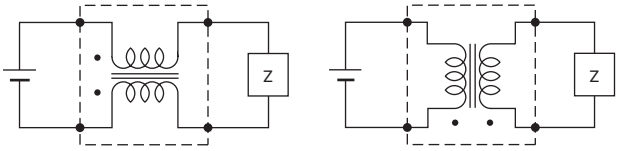
⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance. Be sure to provide an appropriate fail-safe function on your product to prevent secondary damage that may be caused by the abnormal function or the failure our product.

Soldering and Mounting

1. Self-heating
   Please pay special attention when mounting chip common mode choke coils DLW5 series in close proximity to other products that radiate heat.
   The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.
2. Mounting Direction
   Mount Chip Common Mode Choke Coils in the right direction. The wrong direction, which is 90 degrees rotated from the right direction, causes not only open or short circuit but also flames or other serious problems.



right direction　　wrong direction

Notice

Storage and Operating Conditions

<Operating Environment>
Do not use products in a corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases (a sea breeze, Cl_2, H_2S, NH_3, SO_2, NO_2, etc.).
Do not use products in an environment close to an organic solvent.
<Storage and Handling Requirements>
1. Storage Period
   DLM11G series should be used within 6 months; the other series should be used within 12 months.
   Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40˚C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product can be caused by the cleaning method. When you clean in conditions that are not in the mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.
3. Other
   Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

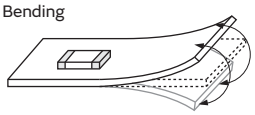
Common Mode Choke Coil/Common Mode Noise Filter (DLM/DLP/DLW/NFP) ⚠Caution/Notice

Continued from the preceding page.↘

Handling

1. Resin Coating (except for DLW Series)
   Using resin for coating/molding products may affect the product's performance.
   So please pay careful attention in selecting resin.
   Prior to use, please make a reliability evaluation with the product mounted in your application set.
2. Resin Coating (DLW Series)
   The impedance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the coil wire and leading to an open circuit.
   Therefore, please pay careful attention to selecting the resin for coating/molding the products. Prior to using the coating resin, please ensure that no reliability issue is observed by evaluating products mounted on your board.
3. Caution for Use (DLW Series)
   When you hold products with a tweezer, please hold by the sides. Sharp materials, such as a pair of tweezers, should not touch the winding portion to prevent breaking the wire. To prevent breaking the core, mechanical shock should not be applied to the products mounted on the board.
4. Brushing
   When you clean the neighborhood of products such as connector pins, cleaning brush bristles should not be touched to the winding portion of this product to prevent breaking the wire.
5. Handling of Substrates
   After mounting products on a substrate, do not apply any stress to the product by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening a screw to the substrate. Excessive mechanical stress may cause cracking in the product.

Bending



Twisting

Common Mode Choke Coil/Common Mode Noise Filter (DLM/DLP/DLW/NFP) Soldering and Mounting

1. Standard Land Pattern Dimensions

Land Pattern + Solder Resist | Land Pattern | Solder Resist (in mm)

Series	Standard Land Dimensions
DLM0QS **DLM0NS** **DLM11G** **DLM11S** **DLP0QS** **DLP0NS** **DLP11R** **DLP11S** **DLP11T** **DLP31S** **DLP1ND** **DLP2AD** **DLP31D** **DLW21H** **DLW21S** **DLW31SN** **NFP0QH** **NFP0QS** **DLW44** **DLW5A** **DLW5B**	●Reflow and Flow DLP31S  DLP31D  ●Reflow Soldering DLM0QS/DLP0QS/NFP0QH/0QS  DLM0NS/DLP0NS  DLP11S/DLM11S  DLP11R/11T  DLP1ND  DLP2AD  DLM11G  DLW21S/21H/31SN  DLW44  DLW5A/5B (except for DLW5AT_MQ2) 
Series	a	b	c	d
DLW21S/H	0.8	2.6	0.4	1.2
DLW31SN	1.6	3.7	0.4	1.6

*1: If the pattern is made wider than 1.2mm (DLW21) / 1.6mm (DLW31S) it may result in components turning around, because melting speed is different. In the worst case, short circuit between lines may occur.
*2: If the pattern is made with less than specified dimensions, in the worst case, short circuit between lines may occur due to spread of soldering paste or mount placing accuracy.
*3: If the pattern is made wider than 0.8mm (DLW21) / 1.6mm (DLW31SN), the bending strength will be reduced.
Do not use gild pattern; excess soldering heat may dissolve the metal of a copper wire.

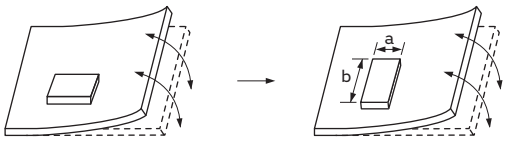
PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



Poor example　Good example

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip common mode choke coils, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.
When flow soldering the chip common mode choke coils, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, it may overflow into the land or termination areas and yield poor solderability.
In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during the flow soldering process.

3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip common mode choke coils.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products.
If using DLP/DLM series with Sn-Zn based solder, please contact Murata in advance.

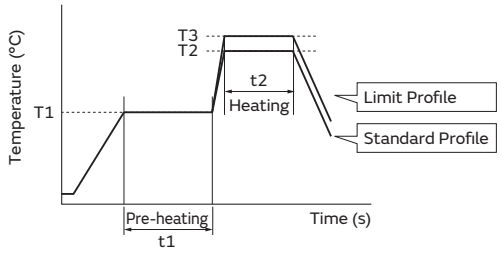
Flux:

- Use rosin-based flux.
  In case of DLW21/31 series, use rosin-based flux with converting chlorine content of 0.06 to 0.1wt%.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time (t1)	Temp. (T2)	Time (t2)		Temp. (T3)	Time (t2)

Common Mode Choke Coil/Common Mode Noise Filter (DLM/DLP/DLW/NFP) Soldering and Mounting

Continued from the preceding page.↘

(3) Reworking with a soldering Iron
The following conditions must be strictly followed when using a soldering iron.
Pre-heating: 150°C 60s min.
Soldering iron power output / Tip diameter:
30W max. / ø3mm max.
Temperature of soldering iron tip / Soldering time / Times:
350°C max. / 3-4s / 2 times*1

*1 DLM0Q/0N,DLP0QS/0NS,DLP11S/11T/1ND
DLP2AD: 380°C max. / 3-4s / 2 times
NFP0QH/0QS cannot be reworked with a soldering iron.
Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

The following conditions should be observed when cleaning chip EMI filters.
(1) Cleaning temperature: 60°C max. (40°C max. for alcohol type cleaner)
(2) Ultrasonic
Output: 20W/liter max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
(3) Cleaning agent
The following cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
Do not clean DLW (except for DLW21H) series.
Before cleaning, please contact Murata engineering.
(a) Alcohol cleaning agent
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agent
Pine Alpha ST-100S

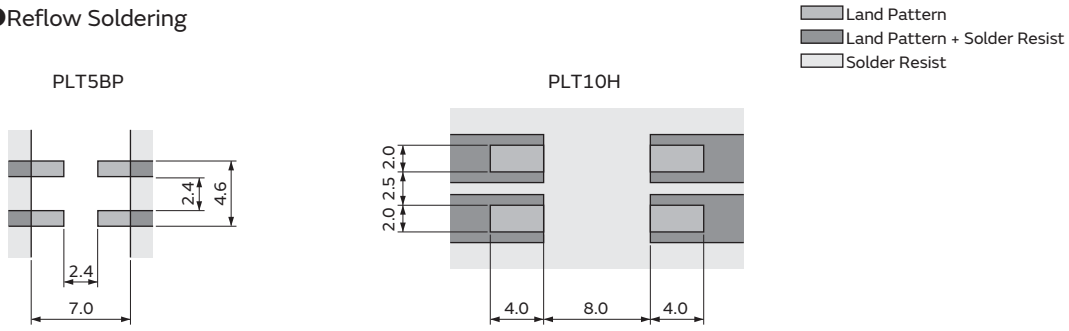
(4) Ensure that flux residue is completely removed.
The component should be thoroughly dried after the aqueous agent has been removed with deionized water.

Common Mode Choke Coil (PLT) Soldering and Mounting

1. Standard Land Pattern Dimensions

(in mm)

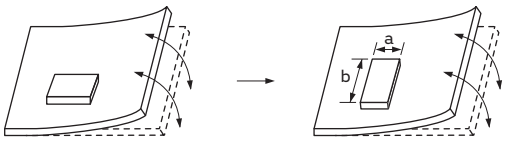
Series	Standard Land Dimensions
PLT5BP **PLT10H**	●Reflow Soldering



● PCB Warping

PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip common mode choke coils, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the chip common mode choke coils, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, it may overflow into the land or termination areas and yield poor solderability.
In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during the flow soldering process.

Series	Solder Paste Printing
PLT5BP **PLT10H**	●Guideline of solder paste thickness: 150μm: PLT5BP 150-200μm: PLT10H For the solder paste printing pattern, use standard land dimensions. *Solderability is subject to reflow conditions and thermal conductivity. Please ensure that your product has been evaluated in view of your specifications with our product being mounted to your product.

Block Type EMIFIL® SMD Type (BNX) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Notice

Storage and Operating Conditions

<Operating Environment>
Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
Do not use products in an environment close to an organic solvent.
<Storage and Handling Requirements>
1. Storage Period
BNX series should be used within 12 months.
Solderability should be checked if this period is exceeded.

2. Storage Conditions
(1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

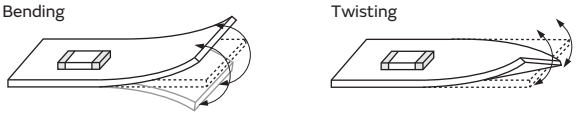
Notice (Soldering and Mounting)

1. Cleaning
Do not clean BNX series (SMD Type).
Before cleaning, please contact Murata engineering.
2. Soldering
Reliability decreases with improper soldering methods.
Please solder by the standard soldering conditions shown in the mounting information.

3. Other
Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Handling

1. Resin Coating
Using resin for coating/molding products may affect the product's performance.
So please pay careful attention in selecting resin.
Prior to use, please make a reliability evaluation with the product mounted in your application set.
2. Handling of Substrates (for BNX02□)
After mounting products on a substrate, do not apply any stress to the product by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening a screw to the substrate.
Excessive mechanical stress may cause cracking in the product.



Block Type EMIFIL® Lead Type (BNX) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Notice

Storage and Operating Conditions

<Operating Environment>
1. Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
2. Do not use products near water, oil or organic solvents.

<Storage and Handling Requirements>
1. Storage Period
   BNX Series should be used within 12 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40°C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product can be caused by the cleaning method. When you clean in conditions that are not in the mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.
3. Other
   Noise suppression levels resulting from Murata's EMI suppression filters "EMIFIL" may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Notice (Appearance)

In some cases, parts of the product surface have a whitish appearance; this is the result of the waxing process for humidity resistance improvement. This wax has no adverse effect on mechanical or electrical performance or on the reliability of the product.

Block Type EMIFIL® SMD Type (BNX) Soldering and Mounting

1. Standard Land Pattern Dimensions

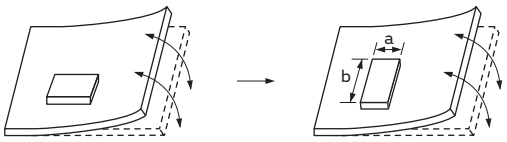
Land Pattern + Solder Resist
Land Pattern
Solder Resist
Through Hole

(in mm)

Series	Standard Land Dimensions
BNX022 **BNX023** **BNX024** **BNX025** **BNX026** **BNX027** **BNX028** **BNX029**	 (1) When a double-sided print board (or multilayer board) as shown in the left figure is designed, apply a soldering Cu electrode with a product electrode to a "Land Pattern"; apply resist to a "Land Pattern + Solder Resist" at the Cu electrode. (2) This product is designed to meet large current. Please design the PCB pattern connected to this product not to become too hot by applied large current. (3) Drop the CG on a ground electrode on the back layer (the same also in a multilayer case) by the through hole. A surface-to-ground electrode layer may also take a large area as much as possible. (4) It is recommended to use a double-sided printed circuit board with BNX mounting on one side and the ground pattern on the other in order to maximize filtering performance; multiple feed-through holes are required to maximize the BNX's connection to ground. (5) The ground pattern should be designed to be as large as possible to achieve maximum filtering performance.

● PCB Warping (for BNX02□)
PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



Poor example　　Good example

2. Solder Paste Printing and Adhesive Application

When reflow soldering the block type EMIFIL®, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

Series	Solder Paste Printing	Adhesive Application
BNX022 **BNX023** **BNX024** **BNX025** **BNX026** **BNX027** **BNX028** **BNX029**	●Guideline of solder paste thickness: 150-200μm 	
Continued on the following page.↗

Block Type EMIFIL® SMD Type (BNX) Soldering and Mounting

Continued from the preceding page.↘

3. Standard Soldering Conditions

(1) Soldering Methods

Use reflow soldering methods only.
Use standard soldering conditions when soldering block type EMIFIL® SMD type.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products.

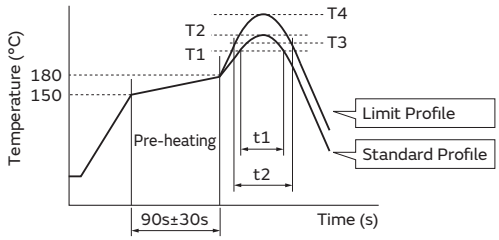
Flux:

- Use rosin-based flux.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Reflow Soldering Profile
(Sn-3.0Ag-0.5Cu solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak Temperature (T2)	Cycle of Reflow	Heating		Peak Temperature (T4)	Cycle of Reflow
	Temp. (T1)	Time (t1)			Temp. (T3)	Time (t2)		
BNX022/023/024/025/026/027/028/029	220°C min.	30 to 60s	250±3°C	2 times max.	230°C min.	60s max.	260°C/10s	2 times max.

(3) Reworking with a soldering Iron

The following conditions must be strictly followed when using a soldering iron.
Pre-heating: 150°C 60s min.
Soldering iron power output: 100W max.
Temperature of soldering iron tip / Soldering time / Times:
450°C max. / 5s max. / 2 time

Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

Do not clean BNX022/023/024/025/026/027/028/029 series. In case of cleaning, please contact Murata engineering.

Block Type EMIFIL® Lead Type (BNX) Soldering and Mounting

1. Mounting Hole

■ Mounting holes should be designed as specified below.

Series	Mounting Hole
BNX01□	Component Side  Terminal Layout (Bottom figure)  PSG: Power supply ground CG: Load circuit ground CB: Load circuit + Bias

2. Using the Block Type EMIFIL® (Lead Type) Effectively

(1) How to use effectively

This product effectively prevents undesired radiation and external noise from going out / entering the circuit by grounding the high frequency components that cause noise problems. Therefore, grounding conditions may affect the performance of the filter and attention should be paid to the following for effective use.

(a) Design maximized grounding area in the PCB, and grounding pattern for all the grounding terminals of the product to be connected. (Please follow the specified recommendations.)

(b) Minimize the distance between ground of the PCB and the ground plate of the product. (Recommend using the through hole connection between the grounding area both on the component side and the bottom side.)

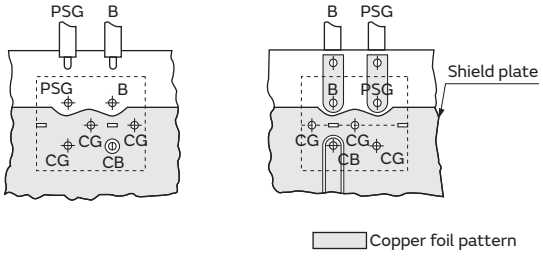
(c) Insert the terminals into the holes on the PCB completely.

(d) Don't connect PSG terminal with CG terminal directly. (See the item 1. Terminal Layout)

PCB Patterns

Use a bilateral PCB. Insert the BNX into the PCB until the root of the terminal is secured, then solder.

(1) Component Side View (2) Bottom View



(2) Self-heating

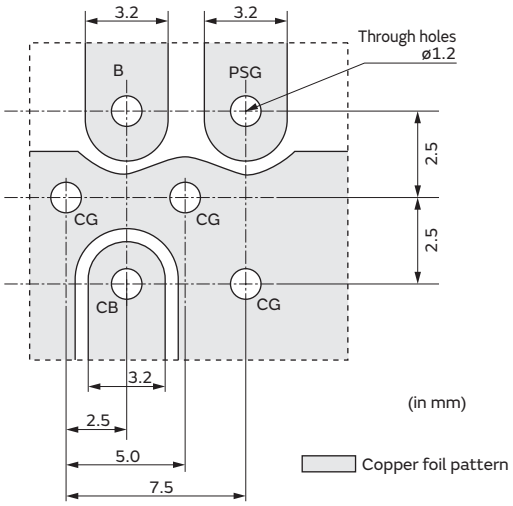
Though this product has a large rated current, localized self-heating may be caused depending on soldering conditions. To avoid this, attention should be paid to the following:

(a) Use a PCB with our recommendation on hole diameter / land pattern dimensions, mentioned in the right-hand drawing, especially for 4 terminals that pass current.

(b) Solder the terminals to the PCB with solder cover area at least 90%. Otherwise, excess self-heating at the connection between terminals and the PCB may lead to smoke and / or fire of the product even when operating at rated current.

(c) After installing this product in your product, please ensure that the self-heating is within the rated current recommended.

Recommended Land Pattern



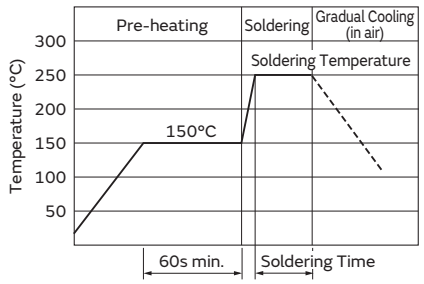
Continued on the following page. ↗

Block Type EMIFIL® Lead Type (BNX) Soldering and Mounting

Continued from the preceding page.↘

3. Soldering

(1) Use Sn-3.0Ag-0.5Cu solder.
(2) Use rosin-based flux. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value).
(3) Products and the leads should not be subjected to any mechanical stress during the soldering process, or while subjected to the equivalent high temperatures.
(4) Standard flow soldering profile



Solder	Soldering Temperature	Soldering Time
Sn-3.0Ag-0.5Cu solder	250 to 260°C	4 to 6s

4. Cleaning

Clean the block Type EMIFIL®(Lead Type) in the following conditions.

(1) Cleaning temperature should be limited to 60°C max. (40°C max for alcohol type cleaner).
(2) Ultrasonic cleaning should comply with the following conditions, avoiding the resonance phenomenon at the mounted products and PCB.
Power: 20W/liter max.
Frequency: 28 to 40kHz
Time: 5 min. max.
(3) Cleaner
(a) Alcohol type cleaner
Isopropyl alcohol (IPA)
(b) Aqueous agent
Pine Alpha ST-100S
(4) There should be no residual flux or residual cleaner left after cleaning.
In the case of using aqueous agent, products should be dried completely after rinsing with de-ionized water in order to remove the cleaner.
(5) The surface of products may become dirty after cleaning, but there is no deterioration of mechanical or electrical characteristics or reliability.
(6) Other cleaning: Please contact us.

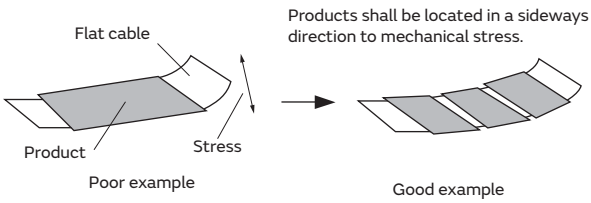
EMC Absorber (EA20/EA21) Notice

Notice

Storage and Operating Conditions

1. Adhesive Tape Stress
   This product is designed to use adhesive tape to hold itself to the object.
   And please avoid causing mechanical stress by bending or variation of the object.



2. Cleaning
   Avoid cleaning this product.
3. Handling of the Product
   Adhesive tape must be clean to maintain the quality of adhesion.
   Please wipe off any dirt, dust and any kind of oil from the surface of the object before use.
4. Storage Conditions
   (1) Storage period
   Products that were inspected by Murata over 6 months ago should be examined and used. This can be confirmed by the inspection number marked on the container.
   Adhesiveness should be checked if this period is exceeded.
   (2) Storage conditions
   · Products should be stored in the warehouse in the following conditions:
   Temperature: -10 to +40˚C
   Humidity: 30 to 70% relative humidity
   No rapid change of temperature or humidity
   · Products should be stored in the warehouse without heat shock condition, vibration, direct sunlight and so on.

⚠Note

1 Export Control

For customers outside Japan:

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

For customers in Japan:

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2 Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

1. *Aircraft equipment*
2. *Aerospace equipment*
3. *Undersea equipment*
4. *Power plant equipment*
5. *Medical equipment*
6. *Transportation equipment (vehicles, trains, ships, etc.)*
7. *Traffic signal equipment*
8. *Disaster prevention / crime prevention equipment*
9. *Data-processing equipment*
10. *Application of similar complexity and/or reliability requirements to the applications listed above*

3 Product specifications in this catalog are as of September 2018. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4 Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5 This catalog has only typical specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6 Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7 No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
