

## DUAL SUPPLY, LOW ON-STATE RESISTANCE SPST CMOS ANALOG SWITCHES

### FEATURES

- $\pm 1$ -V to  $\pm 6$ -V Dual-Supply Operation
- Specified ON-State Resistance:
  - 25  $\Omega$  Max With  $\pm 5$ -V Supply
  - 35  $\Omega$  Max With  $\pm 3.3$ -V Supply
  - 47  $\Omega$  Max With  $\pm 1.8$ -V Supply
- Specified Low OFF-Leakage Currents:
  - 5 nA at 25°C
  - 10 nA at 85°C
- Specified Low ON-Leakage Currents:
  - 5 nA at 25°C
  - 10 nA at 85°C
- Low Charge Injection: 13 pC ( $\pm 5$ -V Supply)
- Fast Switching Speed:
  - $t_{ON} = 85$  ns,  $t_{OFF} = 50$  ns ( $\pm 5$ -V Supply)
- Break-Before-Make Operation ( $t_{ON} > t_{OFF}$ )
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2500-V Human-Body Model (A114-F)
  - 1000-V Charged-Device Model (C101-C)
  - 250-V Machine Model (A115-A)

### DESCRIPTION/ORDERING INFORMATION

The TS12A4516/TS12A4517 are single pole/single throw (SPST), low-voltage, dual-supply CMOS analog switches, with very low switch ON-state resistance. The TS12A4516 is normally open (NO). The TS12A4517 is normally closed (NC).

These CMOS switches can operate continuously with a dual supplies between  $\pm 1$  V and  $\pm 6$  V [ $2$  V  $< (V_+ - V_-) < 12$  V]. Each switch can handle rail-to-rail analog signals. The OFF-leakage current maximum is only 5 nA at 25°C or 10 nA at 85°C.

For pin-compatible parts for use with single supply, see the TS12A4514/TS12A4515.

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
- (3) Voltages exceeding  $V_+$  or GND on any signal terminal are clamped by internal diodes. Limit forward-diode current to maximum current rating.

## APPLICATION INFORMATION

### Power-Supply Considerations

The TS12A4516 and TS12A4517 operate with power-supply voltages from  $\pm 1$  V to  $\pm 6$  V [ $(2 \text{ V} < (V_+ - V_-) < 12 \text{ V})$ ], but are tested and specified at  $\pm 5$ V,  $\pm 3.3$ V, and  $\pm 1.8$ V supplies. The pin-compatible TS12A4514 and TS12A4515 are recommended for use when only a single supply is desirable.

The TS12A4516 and TS12A4517 construction is typical of most CMOS analog switches, except that they have only two supply pins:  $V_+$  and  $V_-$ .  $V_+$  and  $V_-$  drive the internal CMOS switches and set their analog voltage limits. Reverse ESD-protection diodes are internally connected between each analog-signal pin and both  $V_+$  and  $V_-$ . One of these diodes conducts if any analog signal exceeds  $V_+$  or  $V_-$ .

Virtually all the analog leakage current comes from the ESD diodes to  $V_+$  or  $V_-$ . Although the ESD diodes on a given signal pin are identical and, therefore, fairly well balanced, they are reverse biased differently. Each is biased by either  $V_+$  or  $V_-$  and the analog signal. This means their leakages will vary as the signal varies. The difference in the two diode leakages to the  $V_+$  and  $V_-$  pins constitutes the analog-signal-path leakage current. All analog leakage current flows between each pin and one of the supply terminals, not to the other switch terminal. This is why both sides of a given switch can show leakage currents of the same or opposite polarity.

$V_+$  and  $V_-$  also power the internal logic and logic-level translators. The logic-level translators convert the logic levels to switched  $V_+$  and  $V_-$  signals to drive the analog signal gates.

### Logic-Level Thresholds

Since these parts have no ground pin, the logic-level threshold is referenced to  $V_+$ . The threshold limits are  $V_+ - 1.5$  V and  $V_+ - 3.5$  V for  $V_+$  levels between 6 V and 3 V. When  $V_+ = 2$  V, the logic threshold is approximately 0.6 V.

#### CAUTION:

**Do not connect the TS12A4516/TS12A4517  $V_+$  to 3 V and then connect the logic-level pins to logic-level signals that operate from 5-V supply. TTL levels can exceed 3 V and violate the absolute maximum ratings, damaging the part and/or external circuits.**

### Test Circuits/Timing Diagrams

**Figure 1. Charge Injection**

Figure 2. Switching Times

Measurements are standardized against short at socket terminals. OFF isolation is measured between COM and OFF terminals on each switch. ON loss is measured between COM and ON terminals on each switch. Signal direction through switch is reversed; worst values are recorded.

$$\text{OFF Isolation} = 20 \log \frac{V_{OUT}}{V_{IN}}$$

$$\text{ON Loss} = 20 \log \frac{V_{OUT}}{V_{IN}}$$

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=100ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

## DBV0005A

### SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

4214839/E 09/2019

#### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-178.
4. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.

### NOTES:

- Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed  $.006$  [0.15] per side.
- This dimension does not include interlead flash.
- Reference JEDEC registration MS-012, variation AA.
