AT HOME ALL OVER THE WORLD

Wieland Electric GmbH is a medium-sized family-run electrical and electronics company headquartered in Bamberg. Founded in 1910, Wieland is one of the pioneers of electrical connection technology.

This family business with its international outlook is a market leader in pluggable installation technology for functional buildings, with subsidiaries worldwide and production lines not only in Bamberg but also in the Czech Republic and China.

The Wieland Group, which has included STOCKO Contact GmbH & Co. KG since 1998, is therefore represented in over 70 countries and employs some 2,200 people.

Wieland at a glance

Our range of products and services for your industry

Product portfolio

- Electronic and electrical engineering for the control cabinet
- Safety technology
- Network and fieldbus systems
- Energy bus systems for industry and buildings
- Connectors up to protection rating IP6X
- Building automation
- PCB terminals and plug connectors
- Sensor/actuator cabling

Industries

- Machine building
- Construction machines & cranes
- Buildings and lighting
- Logistics
- Power engineering
- Renewable energy sources
- Heating and air conditioning systems

Business services

- Pre-assembly and wiring
- Product labeling service
- Integrated solutions in distributors
- Customized solutions
- On-site project support
- Optimization of decentralized, pluggable installation solutions
- Certified machine safety tests

Safety training

- Software validation
- CSE Certified Safety Engineer
- Basic principles and standards of functional safety
- Modification of old machinery and major changes
- Design of safety functions and calculation with Sistema
- Machinery Directive, liability issues, and CE Declarations of Conformity

Software/configuration tools

- **wieplan** CLICK2BUY, configuration of terminal strips with online ordering function
- **wieprint**, marking system for DIN rail terminal blocks
- **revos** configurator for connectors
- **gesis[®]PLAN** for building installation
- **podis[®]PLAN** for configuring the **podis[®]** energy bus system
- **samos[®]PLAN6**, programming tool for **samos[®]PRO COMPACT**
- **hmi[®]PLAN**, visualization software for HMI touch panels

Why Wieland?

- Standardized industrial solutions
- Customized solutions
- Support for your project
- Broad product portfolio
- Products usable worldwide due to international licenses
- Group-wide observance of human rights, including at suppliers
- Eco-friendly production

Signal processing throughout your **control system**, with our **connectivity solutions**

Versatility for every application

Wherever current flows and signals are processed, the unique strengths of Wieland Electric **interface** products shine through. Thanks to a broad range of relays, power supplies and overvoltage protection devices, as well as **interface** and analog modules, your application will also become a real all-rounder. Send all the right signals with our interface technology and innovative DIN rail terminal blocks.

Applications:

- Machine building
- Process control
- Transportation & material handling
- Automotive industry
- Power distribution
- Petrochemical
- Food industry
- Manufacturing engineering

Industrial network technology for various applications

Well equipped for increasing digitization of your systems

Modern machines and systems are placing increasing demands on the performance capability of the communication networks used. More and more data belonging to devices within a network are stored on a server for analysis. This server tends to be located in the cloud. With the **wienet** product family you can organise data traffic within your Ethernet network and also check the data allowed to leave the network. Prioritization of the data packets and a fail-safe hardware platform play a key role in this. All the devices within the **wienet** product family have a robust design and are ideal for use in an industrial environment. With the new **wienet** HMI panels you never lose sight of your process and can intervene to control it via the touch user interface.

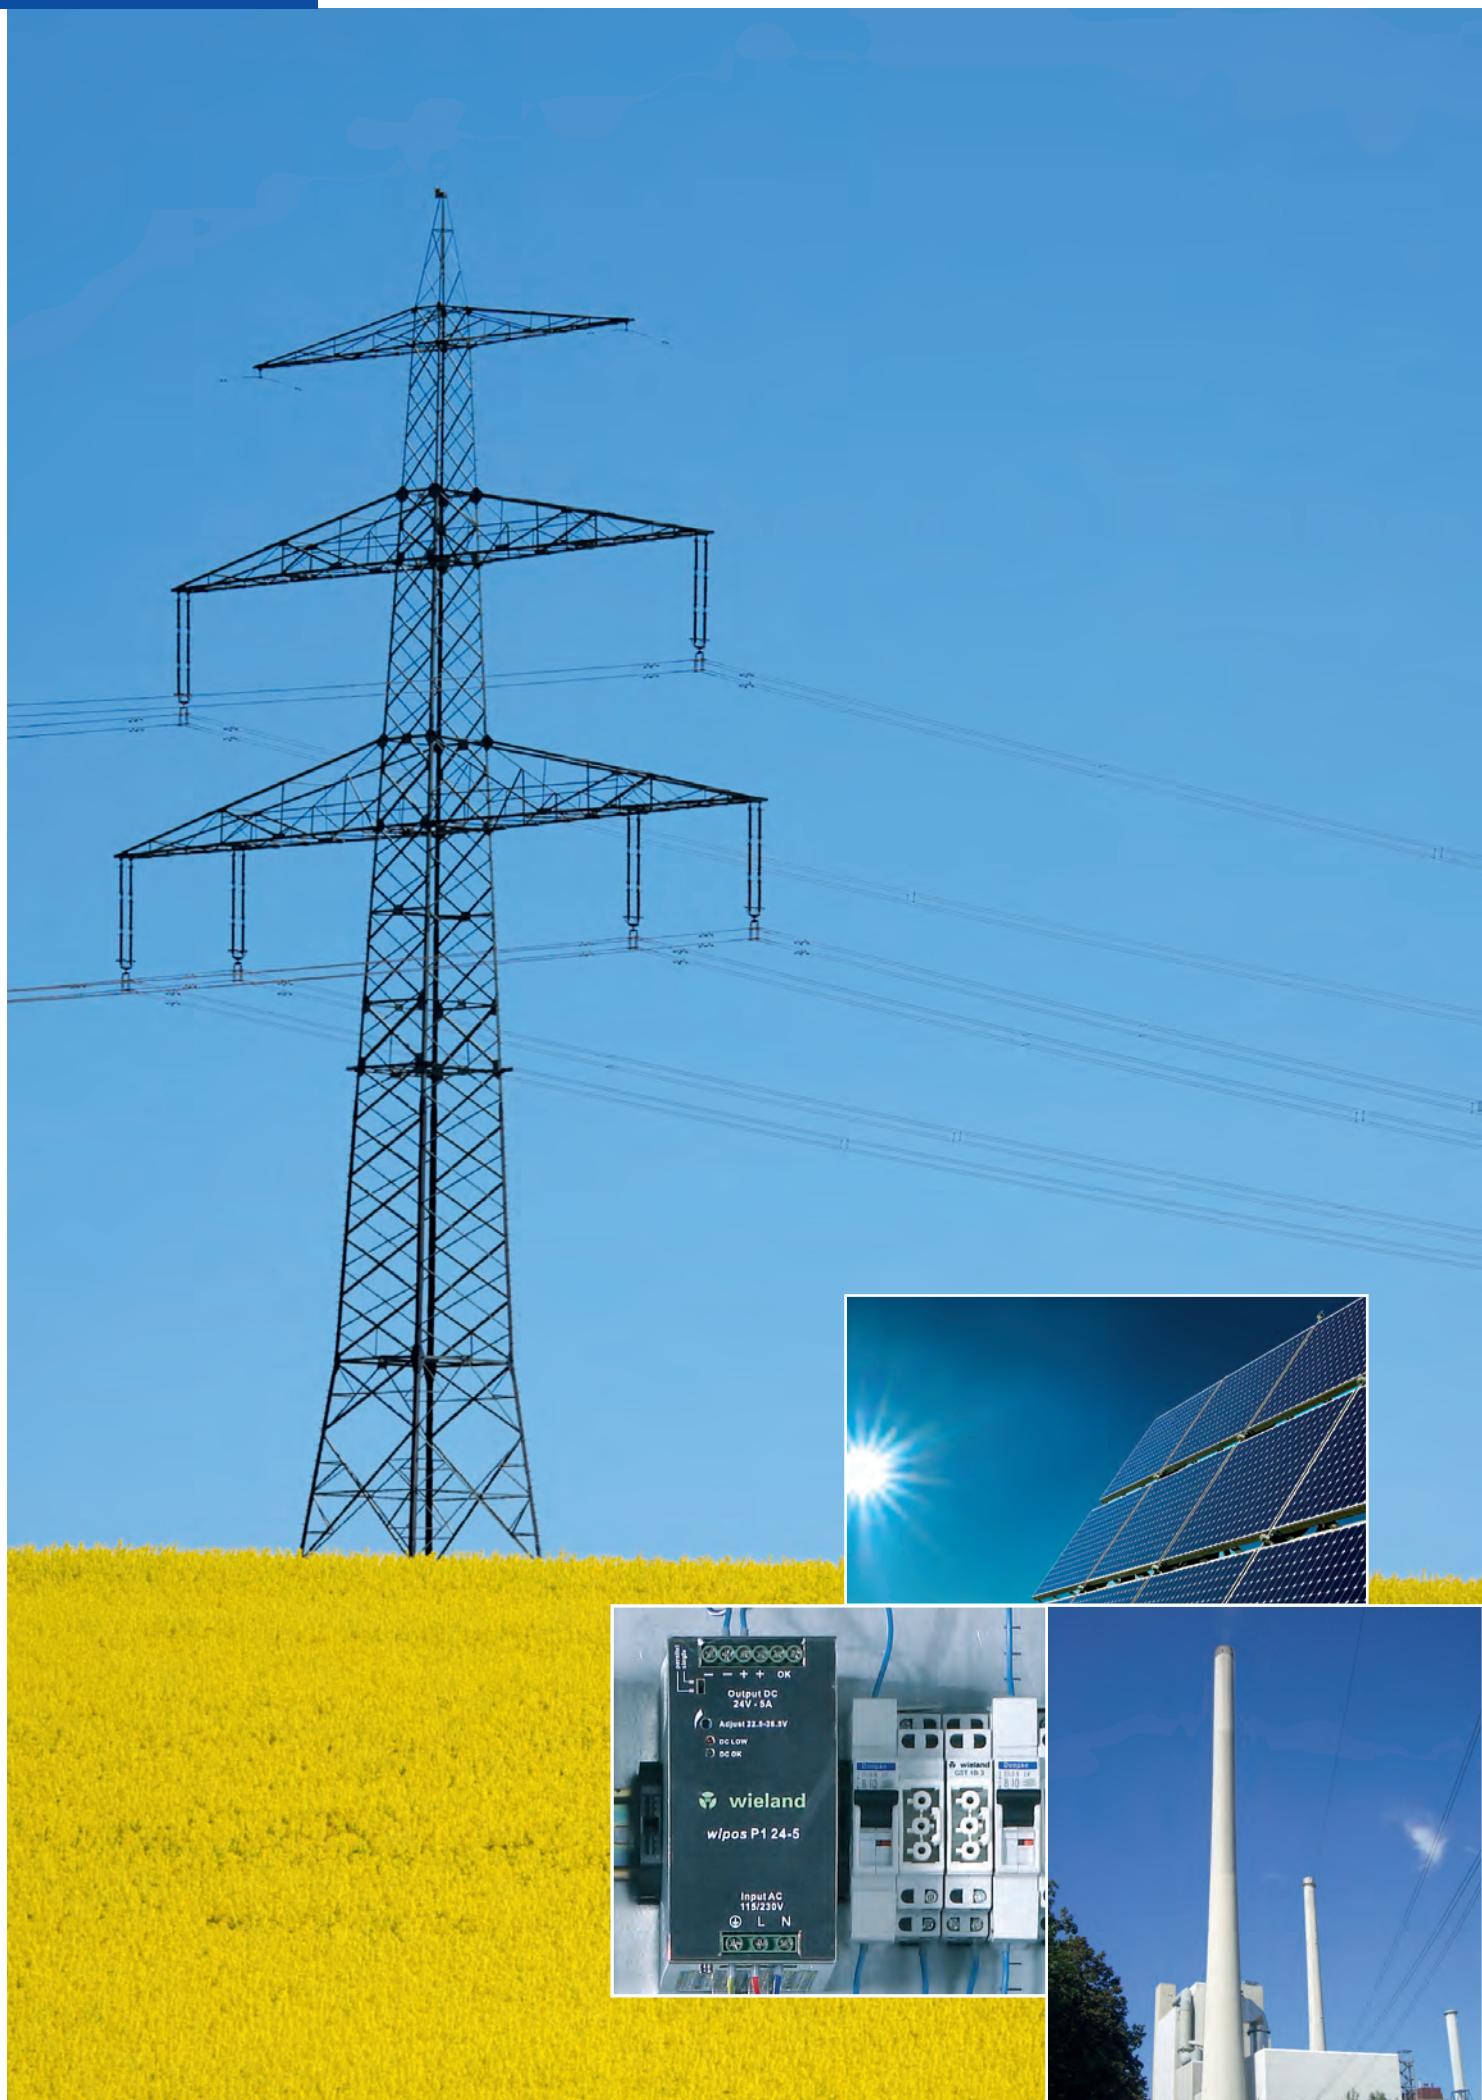

Advantages and features:

- Almost every device has a redundant power supply for maximum availability
- Power over Ethernet (PoE) – full power for your devices with just one Ethernet cable
- Copper, LWL, WLAN or mobile communication as a transmission medium
- VPN router for secure data transmission from the network
- VPN service solutions
- Access point for wireless access to your devices
- Support for industrial automation protocols, such as PROFINET, Ethernet IP, and Modbus TCP
- Wide operating temperature range
- HMI panels for human-machine communication

Please order our special catalog "Industrial Communication" Order No. 0801.1. You will find all necessary information about our **wienet** switches and routers.

wipos Power supply units

Pure Power. No-Frills.

Power supplies perform a central function in the control cabinet. Their reliability affects the availability of the machine or the process to a great degree. That is why a robust and proven design is very important for a power supply unit. There are no unnecessary frills with the **wipos** family. Instead, these power supply units score with their fundamental features.

wipos satisfies your requirements in the significant disciplines:

100% power up to 60°C

Can be connected in **parallel (from 5 A)** to increase power and redundancy

Automatic or wide-input voltage range for worldwide use

High operational reliability due to long hold-up times >30 ms

PFC-technology for high functional reliability

Compensation of voltage drops via adjustable output voltage

Outdoor installation possible due to wide temperature range

Easy to commission via LED diagnosis

Active monitoring with signalling contact

P1/3

For mounting on DIN Rail TS 35 / TS 32

Additional features of **wipos PS1/3**

- Durable in harsh environments
- Compact design
- 120% power boost for 10 s
- Full output during 2-phase operation
- Lloyds Register Ship Approval (LR)

Technical Data	
Input voltage	18 – 30 V
Output current via all 4 fuses	40 A max.
Output voltage	24 V (equivalent to input voltage)
Number of fusing circuits	4
Nominal current of fuse	max. 10 A (check power losses of fuse)
Fuses	4 x G-fuse holder 5 x 20 mm
LED	one per fuse, LED lights when fuse is broken
Alarm contact	yes
Temperature range	0 ... +60 °C
Dimensions (mm) W x H x D	48 x 96 x 68
Mounting type	DIN rail mounting
Weight	110 g
Type of connectors	Screw terminal
Connector size input	10 mm ² (AWG 8)
Connector size output	up to 4 mm ² (AWG 12) solid, 2.5 mm ² (AWG 14) fine-stranded
Approvals	CE, UL

Coupling relays

The safe way to achieve a perfect interface in process applications.

In the microchip age of bits and bytes, one might assume that there is no place left for electro-mechanical relays. Far from it!

In control, transportation and production technology, coupling relays have been reliably accomplishing important tasks for years, and continue to do so.

Together with control systems, they offer numerous possibilities of making your application even safer and less sensitive to disturbances.

Advantages:

- Safe galvanic separation
- Pluggable and compact solutions
- Mounts directly onto a 35-mm DIN rail
- Optional gold-plated contacts
- Screw clamp and tension spring termination
- Display and EMI suppression modules
- Also suitable for railway applications acc. to EN 50155

Passive interface

Always the right connection

Control signals are carried from prefabricated cable harnesses to terminal connections.

Interface modules make the connection between electronic and electrical components within the control panel.

The use of Wieland interface modules provides the following benefits for system wiring:

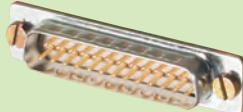

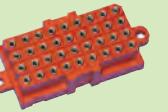

Advantages:

- Simple process which saves time during design and calculation
- Rapid wiring, commissioning and trouble shooting due to clear cabling and pole designations
- Reduction of wiring errors
- Space savings due to high density terminations
- The interface modules are standardly fitted with a mounting foot for DIN / EN mounting rails TS 35 or TS 32.

Analog Isolation Amplifier

flexible & precise

Analog isolation amplifier of the **cores** series

The **cores** series convinces with flexible use in process and industrial automation.

They ensure a defined separation of measurement and process signals from the control system. And it protects against voltage drops.

Analogue isolation amplifiers also convert signals into standardized signal levels.

cores combines a highly precise signal conversion with a very small housing and fulfills actual demands for such products.

The Advantages:

- Digital conversion (up to 16 Bit)
- Highest accuracy (0.1 %) and linearity
- Fastest reaction time (from 11 ms)
- 3 or 4 way galvanic isolation
- High isolation voltage
- Compact housing (also as thin as 6.2 mm)
- Universal functions settable
- Wide temperature range

Analog Isolation Amplifier

cores C1 UI-B

I/O fieldbus system

Economical, compact and modular

In **ricos** FLEX, Wieland Electric is offering a continuous fieldbus concept for the interchange of data between controller and field periphery. The modular I/O nodes are installed decentrally, close to the machine, and networked via the fieldbus. A broad range of I/O modules process the various actuator/sensor signals. Diverse diagnostic functions permit a significant reduction in machine standstill times.

Advantages:

- Cost-efficiency through a highly modular design
- 2 to 8-channel modules
- Narrow module width of 12.9 mm
- Up to 64 modules can be connected to each bus coupler
- Spring tension connection terminals
- Very fast reaction time
- Individual channel inscription

High-performance rear wall bus

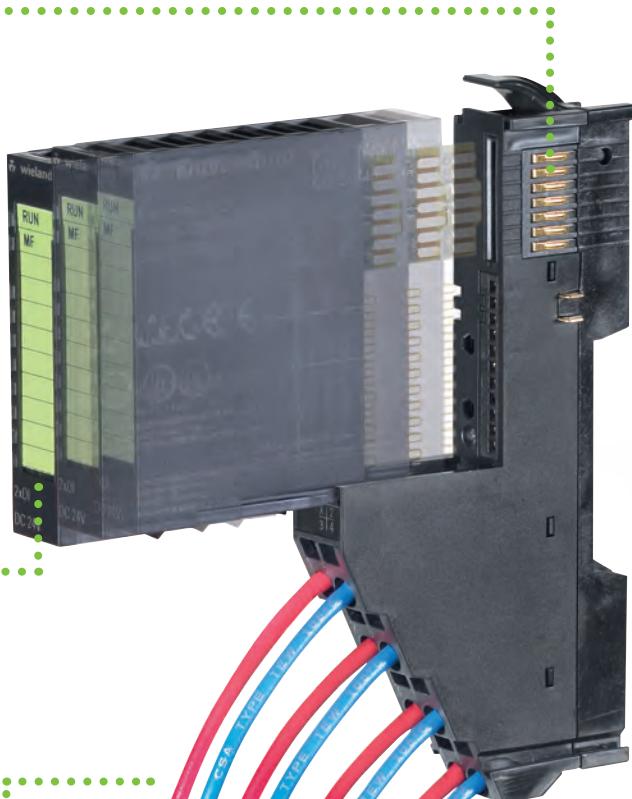

- 48 Mbit/s transmission speed
- Very fast reaction time of up to 20 µs
- One connection module for all application modules

Easy to assemble/service

- Simplest assembly thanks to secure sliding mechanism
- Module protection through coding
- Service-friendly combination of connection module and application module
- Recommendation: top hat rail mounting (TS 35 x 15)

Clearly arranged status and diagnostic displays with direct channel assignment for fast troubleshooting.

**Space-saving connection technology**

- Stepped wiring level with spring force terminal technology
- Simple module replacement with permanent wiring
- High modularity with 2, 4 and 8-channel modules

Inscription strips for individual marking of each channel.

ricos FLEX

Can be combined and used for any application.

ricos FLEX is a module and extremely compact I/O system. It can be combined and used with any PLC and any IPC.

ricos FLEX combines high functionality with an intelligent housing concept in an extremely compact design.

ricos FLEX is highly compact and precisely, matched, bit by bit, to the requirements of the application concerned.

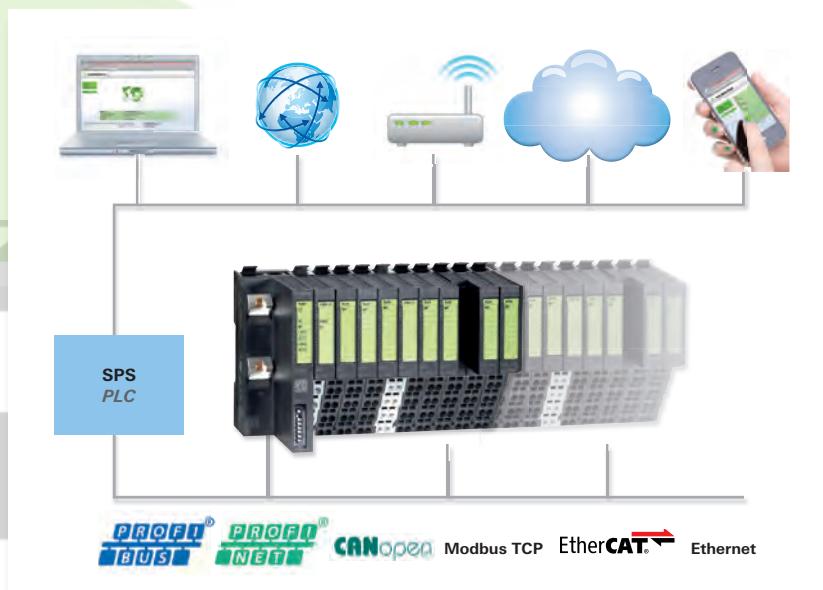

All bus couplers support up to 64 user modules. One module unit comprises a connection module and an electronic module, which are connected by means of a slide and click mechanism.

The connection module combines terminals, mounting for the electronic module and the ricos FLEX rear wall bus connector.

So for servicing, only the electronic module is replaced by simply pulling out the connection module – the wiring and mounting on the 25 mm DIN profile rail remain intact.

The spring force terminals arranged step-wise on the connection module permit fast, clearly arranged and safe wiring.

The integrated status LEDs and the inscription strips on the front of the electronic modules guarantee channel-specific, clear assignment and readability of the channel statuses.

Timers

Always up to the minute

The electronic relays are ideally suited for standard, monitoring and control tasks in order to control function processes down to the second. Depending on the application, multiple-voltage and multi-functional relays are available.

Decades of timer know-how are packed into a completely new, highly miniaturized generation of timers just 22.5 mm wide. Although the end of the timer has been being predicted for years now, as the PLC has spread, high quality timers with well thought-out designs and universal application will continue to be needed in industrial automation.

Timers remain crucial – in less complex series machines, in later modifications, everywhere where other solutions would result in unnecessary engineering and hardware costs. For these applications Wieland offers a range of timers that provides everything you need. These devices unite diverse features with an efficiency that permits the fullest profitability – from procurement and warehousing through application and operation, and finally to disposal.

Multiple-voltage ergonomic and mobile

flare TIME series of timer relays

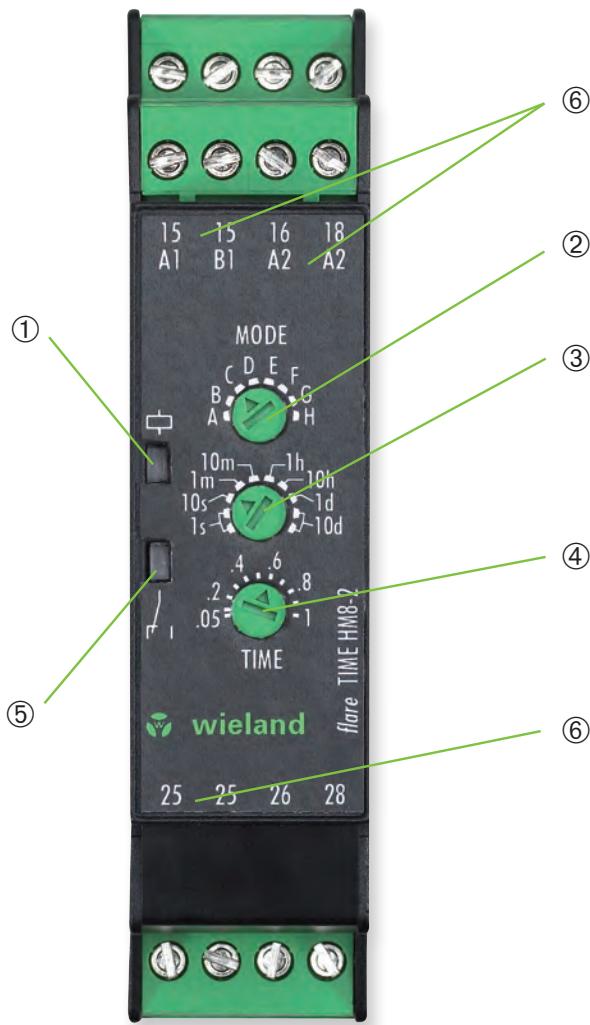

Our **flare** TIME family features universal application in the industrial automation sector. Up to 8 functions in just one relay cover all of your requirements and reduce inventory costs as well. Existing production processes can be easily expanded thanks to our **flare** TIME timer relay series, without incurring additional engineering and hardware costs. Our timer relays can be used in bakery machines, industrial washing machines, elevators and escalators, access controls and much more.

Features:

- Ambient temperatures from -25 °C to +60 °C
- Very high interference voltage resistance
- Output relays correspond to utilization category AC-15 and DC-13

The advantages:

- ① Power LED with progress display
- ② Function setting
- ③ Time range setting
- ④ Clear time setting
- ⑤ LED as status indicator of the change-over contact
- ⑥ Double connection points internally connected (HM series)

Measuring & control

precise and safe

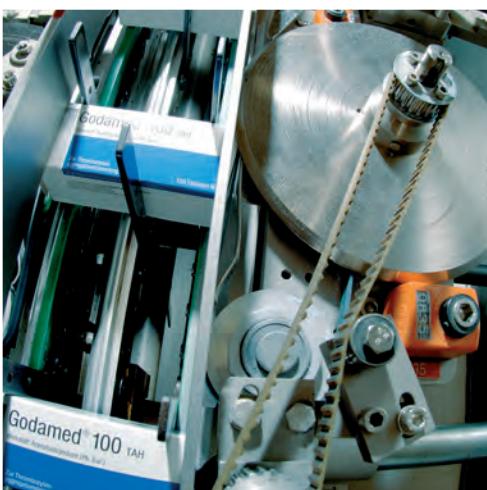

Always live

Electronic measuring and monitoring relays for measuring input values such as current, voltage, 3-phases, cos phi, temperature. They carry out both simple and complex monitoring in machines and systems.

Features:

- The optimum device for every monitoring task
- Voltage, current, phase sequence, phase error, temperature or cos phi
- Broad temperature range
- Gold-plated switching contacts for maximum operational reliability

Benefits

- Upper and lower threshold separately adjustable
- 3 measuring ranges (single phase)
- Closed circuit or operating circuit principle
- Time delay 0 ... 10 s adjustable
- Wide input voltage range 20.4 ... 264 V AC/DC
- Width 22.5 mm
- Pluggable screw clamps
- Wide temperature range

Multi-functional measuring relay

economical & flexible

Measuring relays **flare** CONTROL

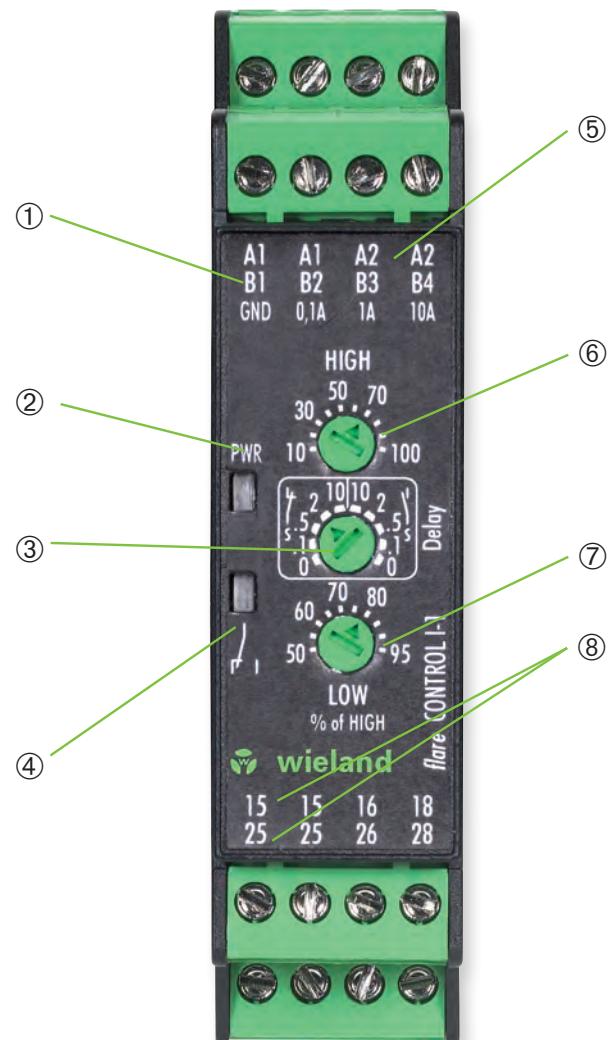

The product family **flare** CONTROL convinces by the universal use in industrial automation.

All functions required for measuring relays are combined in one device. Only one type for current and voltage measurement is necessary.

This simplifies engineering and reduces stock.

Features:

- ① 3 measuring ranges in one device
- ② Power LED
- ③ Adjustable for closed circuit or operating circuit principle
In additional also time delay for exceeding the threshold
- ④ LED for exceedance of the threshold value
- ⑤ One terminal for supply voltage
- ⑥ Upper threshold in percent of measuring range
- ⑦ Lower threshold in percent of upper threshold
- ⑧ 2 changeover contacts simultaneously switching, one changeover contact output per terminal

wietap Overvoltage protection

Important information on overvoltage

The necessity of overvoltage protection on machines and systems as well as for building technology is ever increasing. The potential danger of damage and even complete destruction posed to valuable electronic components or even complete production systems, computer systems or communication systems by sudden overvoltage from the grid, or direct lightning strikes has mobilized not just insurance companies. Well-advised users also know the importance of protecting their electrical devices, plants and systems both sufficiently and reliably against this danger, and the overall advantage of increasing their system availability.

Overvoltage protection modules

Overvoltage protection modules come in three type categories which designate their capacity to absorb overvoltage energy. Type 1 arresters can divert the largest amount of energy to ground (PE). The ideal installation location for these devices is at the building's main supply. In this configuration the impulse energy is considerably weakened, if it moves downstream into the installation. In sub-panels and control cabinets, this surplus energy is reduced further by type 2 and 3 arresters, thus maintaining the survival of the protected devices.

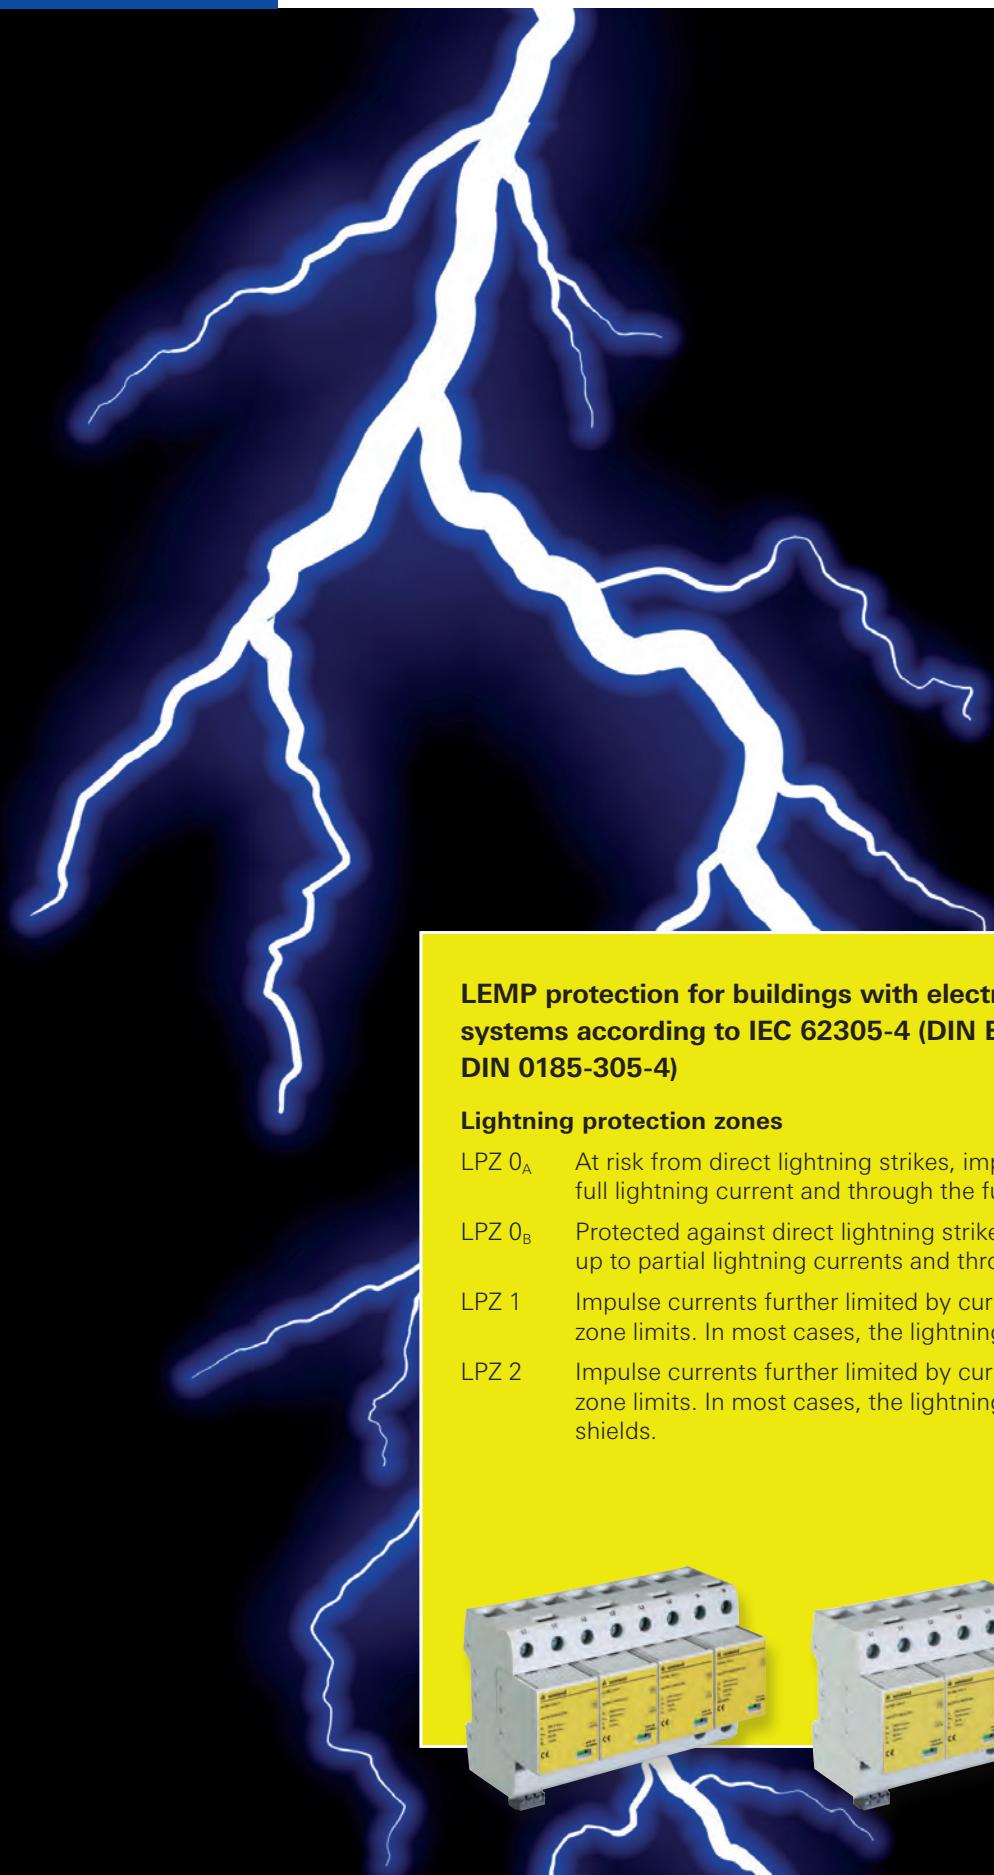

Table 1

LEMP protection for buildings with electrical and electronic systems according to IEC 62305-4 (DIN EN 62305-4, DIN 0185-305-4)

Lightning protection zones

- LPZ 0_A At risk from direct lightning strikes, impulse currents up to the full lightning current and through the full lightning field.
- LPZ 0_B Protected against direct lightning strike. At risk from impulse currents up to partial lightning currents and through the full lightning field.
- LPZ 1 Impulse currents further limited by current division and SPDs at the zone limits. In most cases, the lightning field is attenuated by shields.
- LPZ 2 Impulse currents further limited by current division and SPDs at the zone limits. In most cases, the lightning field is attenuated by local shields.

Playing it safe with **overvoltage protection**

Very short response time and high discharge capacity

With its considerably expanded **wietap** product range, Wieland Electric offers comprehensive solutions for overvoltage protection in control cabinets and sub panels of machines and buildings, as well as for photovoltaic systems. The components, which are modular and DIN rail mountable, range from the ready-to-connect 3-phase combi-arrester **wietap V M** for the main distribution, to the overvoltage protection module **wietap G M** for sub panels, up to the overvoltage module **wietap R M** intended for the control cabinet or constructed into the equipment.

All components are designed for application temperatures from -40 to 80 °C and have a high discharge capacity. Devices are also available with a remote signaling contact.

Properties of wietap:

- Electrically coordinated product family
- Highest discharge capacity up to 100 kA
- No tripping of fuses thanks to follow current limitation
- Latching pluggable protection modules
- Vibration and shock tested acc. to EN 60068-2
- Visual function & defect display for every path
- Modules replaceable without tools
- Can also be used in front of vertical power meter

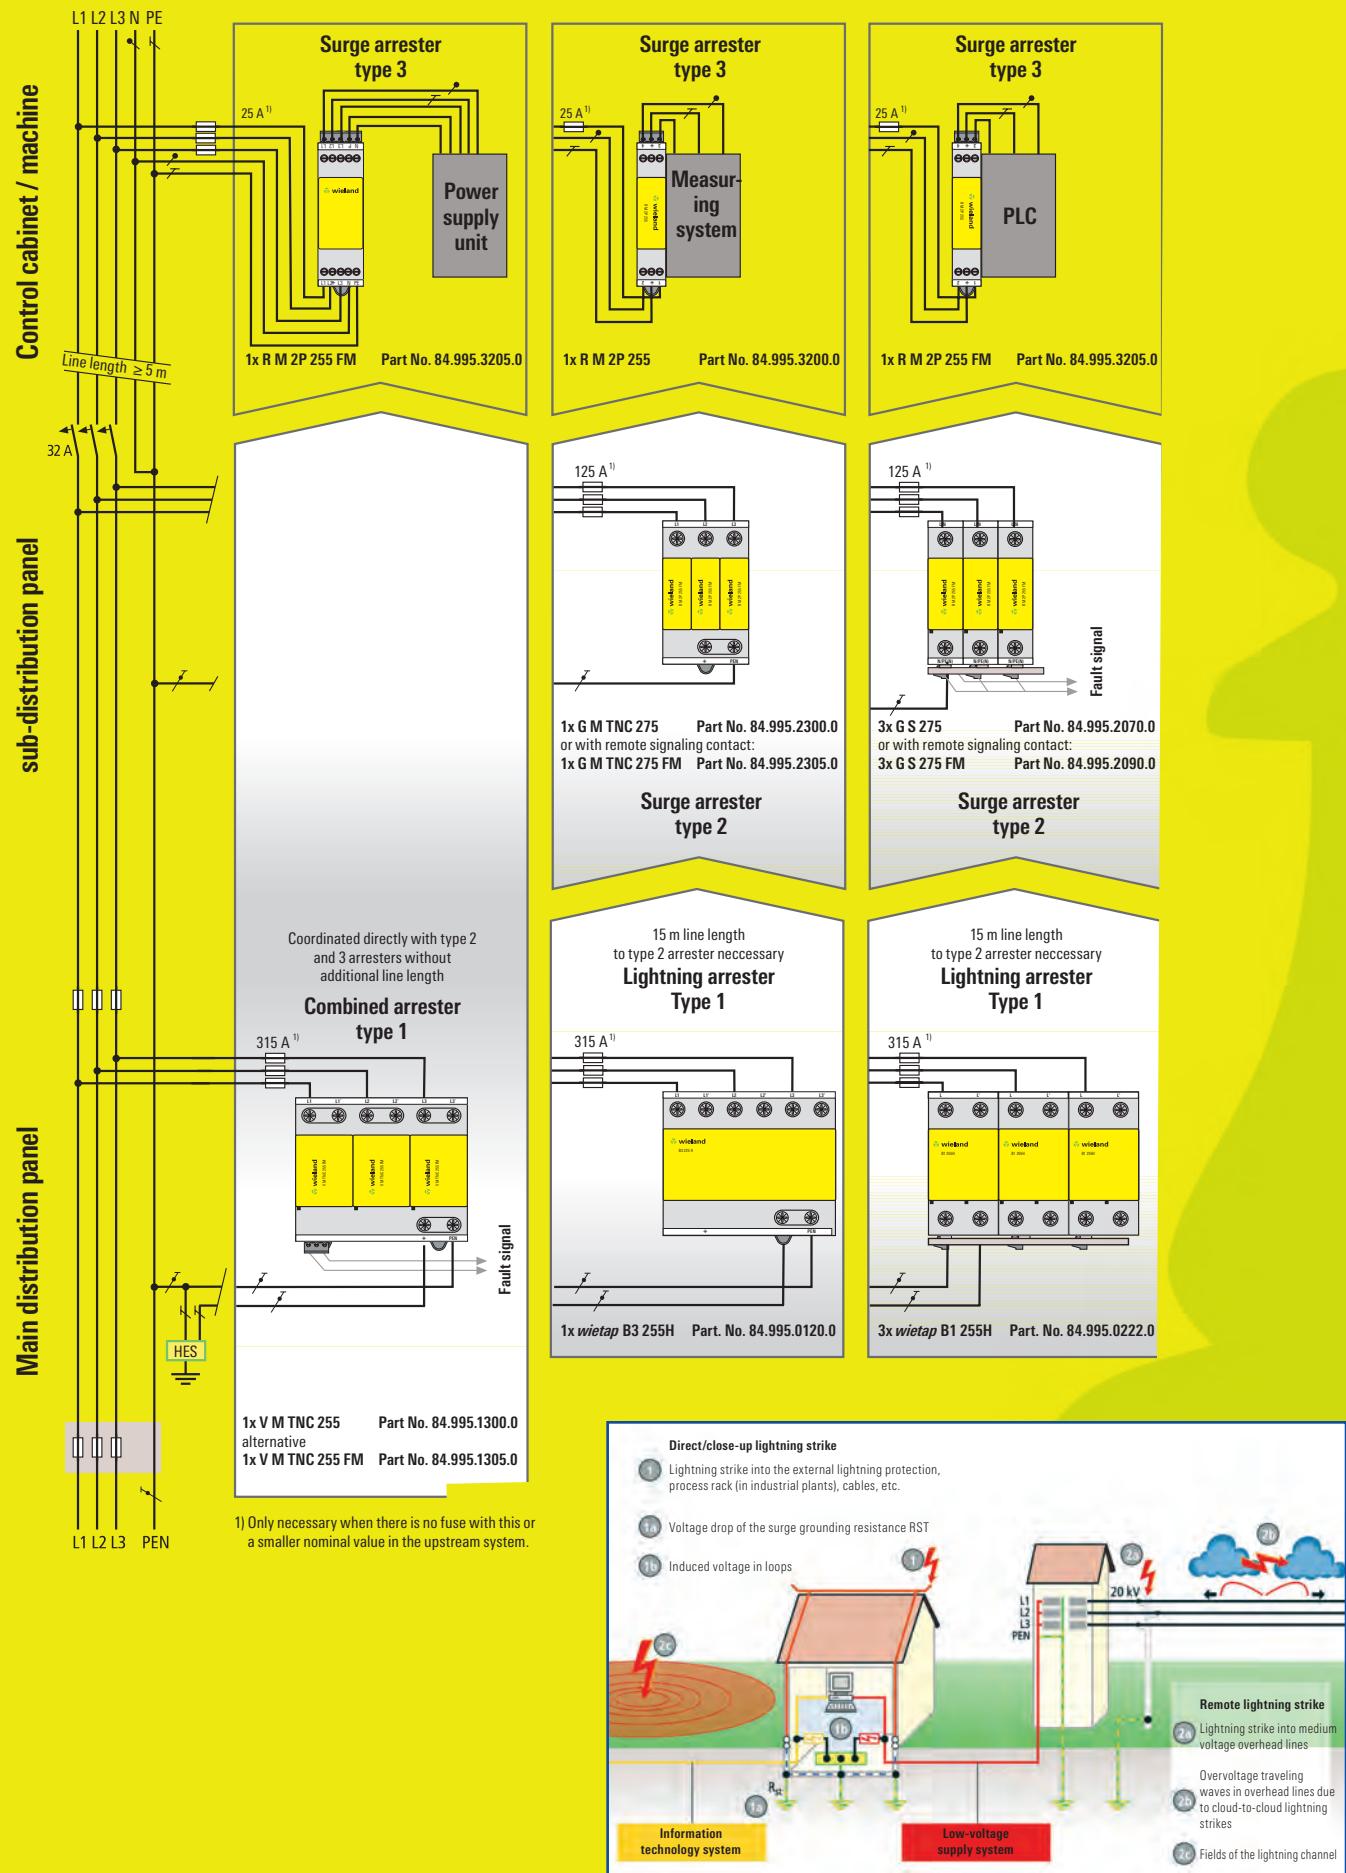

Figure 1

Overvoltage protection

The zone concept for lightning protection

The **zone concept for lightning protection** enables planners, builders and owners to plan, implement and monitor protective measures. All relevant devices, plants and systems can thus be protected reliably at economically justifiable costs.

Direct or close-up lightning strikes are lightning strikes into the lightning protection system of a building, in close proximity to it, or into the electrically conductive systems implemented in the building (e.g. low-voltage supply, telecommunications, control lines). (Fig. 1)

Remote lightning strikes are lightning strikes that occur far away from the object to be protected as well as lightning strikes into the medium voltage overhead system or in close proximity to it, or lightning discharge from cloud to cloud (Fig. 1: cases 2a, 2b and 2c).

In addition to a lightning protection system in the building, additional measures for an overvoltage protection of electrical and electronic systems are required in order to **safeguard the continuous availability** of complex power engineering and IT systems even in the case of a direct lightning strike. It is important to consider all the causes for over-voltages.

The zone concept for **lightning protection** as described in IEC 62305-4 (DIN EN 62305-4, DIN 0185-305-4) applies accordingly (Fig. 3). It divides a building into different risk zones. The relevant protective measures can then be derived for each zone, especially the devices and components for lightning and overvoltage protection.

The zones for lightning protection are defined as described in Table 1.

② Peak current for testing of surge arresters

Overvoltage Protection for North and Central America

For the North and Central American region OVP modules have to be used with UL or CSA approval. At the same time the voltage levels are different compared to Europe or the Asian region.

For this reason Wieland offers specialized OVP modules. The green marked countries have energy network systems according UL and CSA mains systems and voltage levels.

The overvoltage protection according IEEE is defined into 3 different areas:

■ **Category C (Class I according IEC):**

is mainly used at the feed in point of a building or production site. Mainly at outside termination

■ **Category B (Class II according IEC):**

this category is often used inside of buildings in main distribution panels or in switch board cabinets of machines

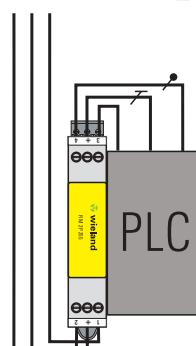

■ **Category A (Class III according IEC):**

is mainly used for the protection of single devices inside a switch board cabinet

Wieland is offering solutions for inside the building. This means for Category B and Category A.

At Category A applications the arrester is connected up front in series to the device.

The rated voltage of the OVP is selected according the nominal voltage of the device which is connected.

Overvoltage protection for Photovoltaic systems

Photovoltaic systems, abbreviated as PV systems, are a considerable investment that must be protected from failure and damage. As these systems are installed outdoors, they are exposed to the danger of overvoltage from lightning strikes.

Overvoltage protection in the DC circuit with central inverters

The generator circuit (the PV modules) produces a direct current. Connecting the PV modules and arrays in series allows voltages of 1000 V to be reached. This combination with the fact that the generator circuit can continue to supply energy after overvoltage requires sophisticated technology for the overvoltage arrester.

DC overvoltage protection:

The PV/DC overvoltage arresters are specially designed for use in PV systems.

Both the housing technology and the connections are designed for the requirements of a PV systems high voltages and conductor cross-sections. With a width of only 36 or 48 mm, the units are easily installed inside distribution panels, requiring the minimum of space.

- High discharge capacity due to powerful zinc-oxide varistor
- No fire hazard caused by permanent electric arc due to combined disconnect and short-circuit facility. Overload indicated in display window
- Signaling contacts for remote monitoring in all remote signaling types

AC overvoltage protection:

On the AC side of the inverters overvoltage protection must also be installed. The arresters listed here are the most commonly used versions.

Suitable units can be found inside the chapters **wietap** IEC and **wietap** UL/CSA.

Industrial technology

Solutions for the control cabinet

- DIN rail terminal blocks
 - Screw, tension spring or push-in connection technology
 - Wire cross sections up to 300 mm²
 - Numerous special functions
 - Software solutions interfacing to CAE systems
- Safety
 - Safe signal acquisition
 - Safety switching devices
 - Modular safety modules
 - Compact safety controllers
 - Application consulting and training
- Network engineering and fieldbus systems
 - Remote maintenance via VPN industrial router and VPN service portal
 - Industrial Ethernet switches
 - PLC and I/O systems, standard and increased environmental conditions
- Interface
 - Power supply units
 - Overvoltage protection
 - Coupling relays, semiconductor switches
 - Timer relays, measuring and monitoring relays
 - Analog coupling and converter modules
 - Passive interfaces

Solutions for field applications

- Decentralized installation and automation technology
 - Electrical installation for wind tower
 - Fieldbus interfaces and motor starters
- Connectors for industrial applications
 - Rectangular and round connectors
 - Aluminium or plastic housings
 - Degree of protection up to IP 69
 - Current-carrying capacity up to 100 A
 - Connectors for hazardous areas
 - Modular, application-specific technology

PC board terminals and connectors

- Screw or spring clamp connection technology
- Spacings: 2.5 mm to 10.16 mm
- Reflow or wave soldering process

Building and installation technology

- Building installation systems
 - Main power supply connectors IP 20/IP 65 ... IP 69
 - Bus connectors
 - Low-voltage connectors
 - Power distribution system with flat cables
 - Distribution systems
 - Room automation with KNX, EnOcean, SMI and DALI
 - DIN rail terminal blocks for electrical installations
 - Overvoltage protection
